ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

CAR ORE SHIPPED BY THE DOROTHY

Kingman

The Dorothy mine, at Chloride, formerly the Rough Rider, has just shipped a 50-ton car of ore to the smelter, the ore being taken from a winze that is being sunk from the adit drift. The winze has only reached a depth of 23 feet, but the ore is five feet wide and is practically all of shipping grade. The drift has been carried in on the ore body 125 feet, there being no barren spots in the whole length. From this drift two cars of ore have been shipped that averaged 59 ounces silver and $5 gold. The mine now presents the appearance of one of the best things Chloride has.

The Dorothy is owned by W. P. Turner and J. C. Clark. These men are developing the property as fast as possible and believe they have one of the best bets in camp. The amount of ore taken from the small openings indicates what may be expected of it when it is developed to depth.

DOROTHY SINKING SHAFT BELOW TUNNEL LEVEL

Kingman

Turner and Clark are getting machinery on the Dorothy mine, at Chloride, and will soon be sinking below the present level, where the inflow of water caused cessation of work a few weeks ago. The management has raised to the surface from the tunnel level and timbered it up to be used as a main working shaft. A hoist is being installed on the shaft and the work of sinking will be under way in a few days. MAY 27

The Dorothy has been shipping a large tonnage of rich silver-gold ore and a splendid body of the shipping grade has been opened in the winze. This winze is to be used in the further development of the mine. The gentlemen turned down a number of inviting propositions for the sale of the property, but it is thought that some one with plenty of capital behind him will soon take it over. The mine is one of the best showings in the Chloride section.

The Dorothy mine at Chloride is being equipped with a hoisting plant and other machinery, and the shaft sunk to the 300-ft. level. A tunnel has entered the Dorothy vein 125 ft. and a winze was sunk in 6 ft. of ore, which returned $40 net per ton in car lots. Water stopped sinking, a raise was driven to the surface, and a working shaft timbered. Sinking is under way. 19

C. D. RIDGWAY BUYS INTEREST IN DORTHY

Thursday last the interests of J. C. Clark in the Dorothy group of mines at Chloride passed to Charles D. Ridgway, the sale price being $10,000 for the one-half interest. The Dorothy mine has been under development the past year by the owners, Pitt Turner and J. C. Clark and the shaft sunk to a depth of 150 feet. An adit drift was also carried in on the vein a long distance and considerable ore blocked out. Many cars of ore have been shipped from the property in the sinking of the shaft, no stoping having yet been done, Drifts are to be carried along the vein at the 150 level and the ore blocked out, which will give a large tonnage for immediate extraction. The ore carried values of about $60 per ton across a large vein and the shipments netted better than $1000 per car. The property is close in to the power line that runs from Kingman to Chloride, giving the property cheap power for all purposes whenever it is deemed necessary to put in reduction works for the handling of the lower grades or ore. Kingman

The price of $1,000 cash for one-half interest in the property is considered quite low by those who know its potentialities.

Mr. Ridgway, who becomes part owner in this excellent property, was at one time interested with A. M. MacDuffee in an assay office in Chloride. After leaving that place he had charge of the big assay office of the American Smelting and Refining company in Denver, leaving there some years later for South America, where he had charge of a big mining concern. His return to Chloride is welcomed by his many old time friends, who wish him all kinds of good luck in his new venture.

OPTION DOROTHY MINE.

Pa. 10/30/20

The Copper Age people have aptioned the Dorothy mine ,at Chloride from Pitt Turner and C. D. Ridgway and the work of unwatering the property is now under way. This mine has been opened to a depth of about 100 feet below the adit drift and showed excellent ore. From the adit a large tonnage of ore was shipped to the smelter, but the necessity for the milling of the ore was so apparent that the owners concluded to allow the property to lie idle for a time so that milling people might be brought into the development and milling of the ores. The Copper Age people have a mill close by so they are in position to care for all production without furtner expense.
