## **ACCESS STATEMENT**

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

## **CONSTRAINTS STATEMENT**

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

## **QUALITY STATEMENT**

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

A - Z GYPSUM MINE

LA PAZ COUNTY

KAP WR 11/15/85: Accompanied by Larry Vernon and Jim Beadles, a visit was made to a gypsum mine owned by Mr. Beadles. The property, which he calls the A- Z Gypsum Mine (file), La Paz County was reported to once have been worked by George Campbell to produce agricultural gypsum. The deposit is a young sedimentary gypsum occurrence which consists of selenite crystals intermixed with soil. It possibly was derived by solution transport of gypsum from the Harquahala Gypsum Mine on the pediment on the north side of the valley. Much of the gypsum occurs as masses of selenite crystals. A sample of the crystals (#28211) was brought back for review by Arthur Bloyd, Curator of the Mineral Museum. He felt they had very little or no value to collectors. Jim Beadles address is P O Box 716, Salome, 85348, phone 859-3822 and he lives in Salome. He would like to mine and sell agricultural gypsum. The occurrence is located in NE, Sec 2, T4N R12W. Three samples, numbers 28210 through 28211, were taken. Numbers 28209 and 28210 are samples for analysis.
