ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

1. Information from: Charles Sewell

Address: 260 S. Sewell Place

Tucson, AZ 85748

2. Phone: 296-3492

3. Mine: _____

4. ADMMR Mine File: BETTY S.

5. County: Cochise

6. MILS Number 888

7. Operational Status: Raw Prospect

8. Summary of information received, comments, etc.: Mr. Sewell is a local consulting geologist and has held the claims since 1982. He was contacted for information to update Cochise county MILS. The claims were located on a series of quartz carbonate veins in Tertiary volcanics similar to the volcanic mine area across the border in New Mexico. Gold values up to 1/2 opt were reported from samples collected across the veins. In 1985(?), Mr. Sewell used an air-trac to drill a few shallow holes which yielded mixed results. The gold values, thus far, appear to be somewhat erratic and restricted to narrow structures. The area merits additional work. Identification of a more favorable host, either structural or lithologic, will probably be required.
