ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

Enc: Mine Owner's Report

DEPARTMENT OF MINERAL RESOURCES STATE OF ARIZONA FIELD ENGINEERS REPORT

Mine	BLACK RANGE			Date	April 20, 195	5
District	SAN FRANCISCO,	MOHAVE,	COUNTY	Engi	neer Mark Gemmill	

Subject:

This property has been inactive for a number of years - It may be abandoned.

DEPARTMENT OF MINERAL RESOURSES STATE OF ARIZONA FIELD ENGINEERS REPORT

Mine	BLACK RANGE	(3 claims).	Date January 4, 1940.
			Engineer Elgin B. Holt.
Subject:	OWNER: Peter	Ileson, Oatman, Arizona.	

SYNOPSIS REPORT

LOCATION: Property located in the San Francisco Mining Dist., Mohave County a short distance south of Oatman.

VEIN: Main vein is 35 feet wide; strike S. E. & N. W.; dip 60 deg. N. E.

DEV. WORK: Consists of 3 shafts, one of which is sunk on main vein to depth of 180 feet, with a cross-cut 400 feet in length to vein and a drift 100 feet in length on vein, which averages about \$3.00 per ton in gold. Another shaft was sunk to depth of 100 feet on a vein four feet in width, with 50 feet of drifting on vein at bottom, on which level the vein averages \$6.00 per ton in gold, per Mr. Ileson. Another shaft was sunk on same vein to depth of 200 feet. This shaft is caved in.

> Property has possibilities that it may develop into a large producer of low grade gold ore and merits examination by anyone looking for a gold prospect of promise.

UNITED RANGE

GROUP OF CLAIMS.

San Framisco Mining District,

Moha ve County,

REPORT

Arizona.

These claims, consisting of four locations, about eighty acres in extent, are situated five miles South of Oatman, being about two miles Southeast of the Boundary Cone. the well known landmark in this district.

They are bounded on the West by the Nellie Mining Company's property, on the South by the Black Range Mine, and adjoin on the Northwest the Adams Group. A good wagen road leads to the property from Oatman, or from Needles, California, the latter town being some fifteen miles distance.

The claims are held by possessory right, duly recorded.

Geologically the section in which these claims are located presents very similar features to the ore bearing deposits in this district already proven by mines in operation, the later andesites intersected by rhyolite dikes and veins of quartz and calcite being the principal characteristics. Evidence of ennsiderable movement is patent by the presence of large boulders of Trachyte, Basalt and other debris, distributed in great profusion on the Western and Northern portions of the claims. these boulders having apparently been broken from a strongly marked capping about three-quarters of a mile to the North.

Siliceous material in the form of Geodes, Chalcedony and jasper is found in great quantity over the entire area.

Through the Southerly claims, Nos. 1 and 2, a well defined quartz ledge can be traced for upwards of two thousand feet, being in places twenty feet wide, having the appearance of being deposited by a lateral fault movement, from the enormous ledge now being mined by the Black Range Company. This ledge can be traced by strong outcroppings through the Black Range and Nellie properties but abruptly disappears on its strike at a point about 1500 feet from the Westerly boundary of the Black Range property. The ledge both on the Black Range and on the claims under review maintains a similar strike, being approximately N. 60 W. in both instances.

The fault systems in this district, where demonstrated present precisely similar characteristics to the presumed fault in this ledge, the course of which can only beproperly determined by underground exploration. The Tem Reed and the Gold Read ledges both faulted to the North and at the point where this movement was apparent a concentration of high values in the guarts resulted.

The Black Range Mins, from the development already carried out, is proven as a property of great merit, the outcropping of the ledge at or near the point of intersection being over 100 feet wide. A cross-cut tunnel some sixty feet

2.

in this outcropping failed to expose the foot-wall and two shafts both over 100 feet deep were sunk entirely in ore, but subsequently abandoned owing to the presence of water. The shaft at present being suck in the hanging-wall, out through the ledge at about 55 feet, but is being prosecuted to the 300 foot level with the object of cross-cutting to the ledge at that depth. Values in this ledge have been in many instances phonomenal. Free gold in coarse grains is prosent in the outcropping, and assays up to \$2,000.00 per ton, have been obtained from the surface. In one of the old shafts ore valued at \$1.00 a pound was stated to have been taken out by the early operators. It is generally stated, however, that the ore encountered in the shaft assayed as high as \$25.00 a ton and this is believed to be about the general average of the richer deposits in this section.

Mining can be carried on as cheaply in this location as anywhere in the district. Proximity to Needles, good roads to the property, and adjoining mines in operation all assisting in this direction.

The UNITED RANGE CLAIMS present an opportunity for development with perhaps more promising features than any other prospect in the Oatman field.

Consulting Engineer.

Octman, Arizona. November 20th, 1915. MINE EXAMINATIONS, REPORTS, SURVEYS MANAGEMENT OF MINES

ED. C. JACOBS

OATMAN, ARIZONA,

Joby. 19/19.6

appendix & Report

I hereby recommend the suiting of a shaft on United Range No 2, at a point near the Cocation work, about 300 feet from The Weak and have, and then to Explore The Veni from this point -The appropriate cost of the necessary equipment and of doing the above work would be about Iwenty thousand dollars.

So. C. Jacok
