Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

DEPARTMENT OF MINERAL RESOURCES

STATE OF ARIZONA

FIELD ENGINEERS REPORT

Mine Cendia Claims Date November 2, 1962
District Sunflower District, Maricopa Co. Engineer Lewis A. Smith
Subject: Interview with William B. Harris

Property: 41 unpatented claims (820 acres).

Location: 1 mile west of the Rattlesnake Mine (Approx. S-28, 38 T7N R9E) (In Cendia Wash, a tributary of Slate Creek.)

Owners: William B. Harris, et al, 1016 E. Hazelwood, Scottsdale.

Minerals: Mercury with some copper.

Work: Roads have been built into the lower claims in Cendia Wash. 2 bulldozer cuts were made across outcrops.

Geology: The area consists of amphibolite, and sericite schists which have been intruded by diorite (masses and dikes) and rhyolite porphyry dikes. Several minor faults are transverse to the schistosity. Most of these trend NW-SE and some in the area are pre-mineral. The general trend of the schist laminations is NE-SW, but locally the schist has been folded and crushed, and here no definite trends or dip can be determined. The rocks belong to the Mazatzal Formation, of lower Precambrian. The schist contains zones containing quartz veins, veinlets, and small lenses. The quartz is white colored, dense, and opaque. It contains blebs, impregnations and veinlets of cinnabar, metacinnabarite, siderite, native mercury and brown-orange limonite. General samples of the quartz indicate an average grade of 4-6 pounds of mercury per ton. Local richer lenses are said to run up to 18 pounds. The schist also carries cinnabar, siderite, native mercury and metacinnabarite. According to Harris, the better areas or lenses tend to accumulate in schist rolls or against pre-mineral faults or dikes, where the schist laminae are tight, or where the schist is brecciated.

Mr. William B. Harris visited office - said he is now living at 4337 N. Granite Reef Road, Scottsdale. Phone is WH5-7208. Also said his partner is Raymond Parent, Mining Engineer and Geologist, Apache Junction Phone 986-0319.

Office Visit - July 30, 1965.
