ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

News Release

Mr R.J. MacNeill reports

Phase I exploration drilling has been completed on
zones 1 and 2 of the Gold Basin property, Mohave
county, Arizona. Of 20 vertical holes, 15 were drilled
on the No. 1 zone and 5 on the No. 2 zone. Assays from
5 holes have been received, 2 from No. 1 zone and 3
from No. 2 zone.

Zones 1 and 2 appear to be structurally similar and are
probably contiguous, No. 2 being considerably thicker
than had been previously thought. Oxidation with
hematitic alteration persists to depths in excess of
500 ft, so leaching of the precious metals is not
expected to present a problem. Metallurgical test work
will be carried out.

All holes have anomalous gold intersections, and
preliminary results (5 ft samples, fire assay and AA
finish) from two holes - No. T-15 in zone 1 and No.
T-11 (3600 ft to the north along structure in zone-2)

the Kit claims.

The consideration for the acquisition is \$15,000 and 100,000 shares. A finder's fee of 10,000 shares is payable to LOM Western with respect to this transaction.

News Release

Mr Kenneth Ewald reports

The company's 1990 exploration and development programs on its two gold properties, the Gold Basin in northwestern Arizona and the Gabel Canyon in the Cortez belt, Eureka county, Nevada have commenced.

GOLD BASIN

For the initial part of the program, 20 vertical holes are planned, to define the grades and attitudes of the oxidized gold-bearing zones, especially in the vicinity of the Red Cloud shaft. Several holes of the current program will probe zones 2 and 3. Drilling will commence on or about August 1. The Gold Basin property has the potential for containing up to ten million tons of oxidized gold bearing material grading .04 to .07 oz/ton Au.

GABEL CANYON

This property is optioned to another company which has the right to earn a 50% working interest by funding the exploration. Construction of drill roads, to commence about August 4 will, at the same time, expose for detailed sampling, faces of the Roberts Mountain jasperoid, the favourable gold-bearing host rock. A program of 10 drill holes is planned for the fall of this year.

PRIVATE PLACEMENT

The company is entering a private placement of 400,000 units at \$0.56 per unit. Each unit consists of one common share plus one non-transferable warrant for an additional common share for two years at \$0.56 during the first year and \$0.66 during the second year. A finder's fee of 40,000 units (10%) is payable to LOM Western Securities. Proceeds for the private placement will be used for general corporate matters.

255 - 3793

~~255 - 3793~~

are:

1-15 grades 0.046 oz/ton on fire assay - AA from surface to 125 ft depth.

In T-11, the 55 ft interval commencing at 340 ft depth assayed .649 oz/ton Au. This includes a 30 ft section 60-390 ft assaying .848 oz/ton.

Results from hole T-12, about 80 ft away from T-11 have not yet been received. An additional offset hole is in progress to confirm the results in T-11. All assay sections exhibiting grades above 1 ppm will be checked by gravimetric fire assay.

News Release

Mr G. Arnold Armstrong reports

Voltec has agreed to acquire a 100% interest in the Kit 5 and 6 mineral claims, Nelson mining division, BC from Inter-Pacific Enterprises.

The Kit claims, totalling 60 units, are 30 km southwest of Cranbrook, BC and approximately one mile southeast of the Star property, currently being explored by Barkhor Resources and Kokanee Explorations. The Barb property, which is being explored by Formosa Resources and Chevron Resources, adjoins the western boundary of
