Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

Date

TO: C. R. Sundeen

FROM: J. Olaf Sund

SUBJECT: COPPER GLANCE CLAIMS
% Mr. Herb Gifford
Rte. 3 (Box 321) Yuma

Castle Dome Dist.

MEDESTA (Removal from Yuma)

TYPE: Copper

TERMS REQUESTED: Gifford Jr. was reluctant to say. Suspect they are trying to squeeze as much as possible.

LOCATION:

The group consists of some 18 unpatented claims situated some 6 miles south southeast of the Castle Dome mining district in Yuma County. Specifically, it is situated in Section 5 South and along Range line 18 and 19 West.

GEOLOGY:

The claims are elongated in a general north and south direction. They are underlain mainly by greenish chloritic schists that strike east and west and dip steeply at 80 degrees to the south. These probably represent altered andesitic volcanic rocks and are generally unmineralized. A narrow zone, in places up to 20 feet wide is mineralized with secondary copper. This latter zone is associated with and undoubtedly directly related to a north and south oriented quartz vein that cuts through the volcanic rocks. Weathering of the quartz has spread copper precipitation into the adjacent schists.

SAMPLING:

No samples were collected for assaying because of the fact that, despite any copper values obtained, it was obvious from the surface examination the mineralization was limited.

CONCLUSIONS:

No further consideration should be given to this property.
