## ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

# **CONSTRAINTS STATEMENT**

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

### QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

A. M. WALSH MINING ENGINEER 200- MILLE- BUH LEH NG SAN ERANCISCO

REPORT ON THE EMPIRE GROUP, TOM REED GOLD ROAD DISTRICT, MOHAVE COUNTY, ARIZONA.

The Empire Group, consisting of the Empire # 1, Empire # 2 and Empire # 4 claims, contains a total area of about 60 acres.

LOCATION. This group is located less than five miles, in a northwesterly direction, from the town of Oatman, Mohave County, Arizona, and is reached by a good automobile road with easy grades that leads direct to the property. It is situated in low rolling hills that slope gently toward Silver Creek, is easily approached, and presents no difficulty to transportation of machinery and supplies. The property is well within the known mineral belt of the district, and adjoins the well known Black Wonder Mine on its westerly end.

GEOLOGY. The geology of these claims is identical to that of the Osceola, Gaddis and Perry, Black Wonder and other well known properties that are located on what is known as the Gaddis and Perry Lode. The main ledge that traverses the Empire claims, in an easterly and westerly direction, is a north spur of this lode. The hangingwall of the ledge is granitic porphyry, and the footwall is an igneous rock similiar to greenstone. Its alteration hardly permits an exact determination. The vein, which dips to the north at an angle of about 70 degrees, is 40 feet or more in width, and is composed principally of good looking gold bearing quartz. It is simply a zone of quartz and silicified rock, showing a goodly amount of manganese and iron oxide. There is a well defined gouge on both walls of the ledge, showing that there has been considerable longitudinal or vertical movement, and which argues well for a continuation of the vein to great depth.

DEVELOPMENT. The only work done is the location work required by law to retain title to the ground.

CONCLUSION. A well defined ledge of great width traverses the property for a distance of at least 2000 feet. The property is easily accessible, and thereby requires practically no expenditure for road building. In view of the many promising conditions that exist on the Empire Group, and the fact that many prospects in the district that have shown practically no gold values on the surface have developed into large mines, I consider that this property is worthy of exploration and development.

Respectfully submitted.

Mining Engineer.

Oatman, Arizona, March 27, 1916. A. M. WALSH MINING ENGINEER 280-MILLS-BUILDING
