The following file is part of the

Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

MEETING AGENDA June 4, 2010

INTRODUCTION:

Meeting with Nyal Niemuth – Chief Mining Engineer for AZ Department of Mines & Minerals Resources.

Doris Hagan Colby – Hagan Mines Donald Holcomb & Alma Rose Holcomb – Hagan Mines FLOWER COLD FILE SILVER GULCH LODE FILE

Leticia Leal Niemuth

Meeting Objectives:

GOAL - MARKET - OUT NIGHT JACE

- 1. Determine how to value of property.
- 2. Suggestions on finding buyer for property.

Questions / Topics Related to Objectives:

- 1. What specific steps can you recommend/suggest that the Hagan's take to get an accurate valuation of the Hagan property at a reasonable cost?
- 2. When selecting the professional team for the project what is team comprised of?
 - Recommend professional team
- 3. Suggestions on how property should be marketed.

Any Other Suggestions or Advice:

DRAFT FACT WORK SHEET

HAGAN MINING FACT SHEETS

NAME OF PROPERTY OWNER(S): Doris Hagan Colby and Mary Larman or Hagan Mining Co.

PROPERTY ADDRESS: Hagan Family Mine's – Prescott Valley, Yavapai County

LEGAL DESCRIPTION AND ACREAGE OF PROPERTY:

LONGITUDE AND LATITUDE:

Township 14/0130N, Range 0030W, Section 017, Yavapai County, Legal Lots ?? Township 14/0130N, Range 0030W, Section 018, Yavapai County, Legal Lots ??

DATE MINING OPERATION BEGAN: Early 1920's

LIST SITES MINED ON PROPERTY: - EXAMPLE

Quadrant or Section - Volume - Quality and Weight of precious metal

1920 – NW Quad – 1 ton of gold and grade of precious metal.

1941 - 80 tons of ore was sold to Smut

1920 – 12 tons of gold was sold to Magma

1920 – 1 ton of gold was sold to Smut for \$38,000.00

METHOD OF MINING:

ALSO NEED TO DESCRIBE THE TYPE OF MINING SUCH AS – was it vertical – shaft mining and depth of shaft when mined or horizontal mining.

These claims have been mined with simple equipment and methods such as:

HAND <u>CHEICILES</u> ($\sqrt{\text{sp}}$) WITH HAMMER TO POKE A HOLE INTO THE WALLS OF THE MINE AND PLACED DYMAMITE.

LOADED ORE CAR BY HAND AND THEN USED A WENCH SYSTEM THAT WAS ATTACHED TO A PICK-UP TRUCK AND PULLED IT OUT OF THE SHAFT.

THEN ORE WOULD GO THROUGH A TRUMEL AND CRUSHER A ND CHEMICAL PROCESS TO PULL GOLD OUT OF ORE.

DEPTH OF MINING: IN 1941 FIELD ENGINEER WROTE IN HIS REPORT IT HAS BEEN REPORTED THAT GOLD WAS REACHED AT 80 FOOT. AGAIN IN 1965 IT WAS REPORTED THAT GOLD WAS FOUND AT 100 FOOT. HOWEVER OTHER REPORTS INDICATE THAT THERE ARE THREE LARGE VEINS OF GOLD THAT RUN DEEP INTO THE MINES.

Masa, Chizonia 85207

Dear Ronnie,

data sheets and collector) sheets of the samples (sample of rock attached) showing the high, high end results. It seems the prais in the milliple pipe your because of the overall variance from hard rock) to hard rock.

Hot spots will have to be obeshed and double chiedral to seve you a area for commodily value.

White niewaleous these for hard rocks, with Jail they are going to be simple to earl earl the precious metals. Creich, grind and extension with different solution to exact the extension / platinum / gold hard rock.

DEPARTMENT OF MINERAL RESOURCES STATE OF ARIZONA FIELD ENGINEERS REPORT

DEPT. MINEPAL DESOURCES

RELIVED

APR 3 1941

PHOENIX, ARIZON

Mine FLOWER GOLD - 6 unpatented claims.

Date April 1, 1941.

District Copper Basin District, Yavapai Co.

Engineer Elgin B. Holt.

Subject:

BRIEF REPORT

OWNER: L. J. Hagan, P. O. Box 55, Skull Valley, Arizona.

METALS: Gold and silver; mainly gold.

LOCATION: Property is located 5 miles S. E. of the Skull Valley store and postoffice, at an approximate elevation above sea level of 5,400 feet. The U. S. Navy mine, which has produced considerable zinc-silver ore, is located in mile south of this property. A county maintained road connects mine with Skull Valley.

GEOLOGY: The surrounding country rock for miles around property consists of grano-diorite, which has been intruded by pegmatite, rhyolite and other igneous dikes.

VEINS: The Flower Gold group of claims is traversed by four parallel veins, about 600 feet apart, striking East and West; dip 70 degrees North; also by one North-South vein and another vein striking N. W. & S. E. Free-milling gold ore is found in all of these veins in outcroppings thereof.

DEVELOPMENT WORK: Work on property is confined to the main East-West vein on Flower Gold claim No. 1. This work is described briefly as follows:

MAIN SHAFT was sunk on slope of vein to a depth of 85 feet, with three levels run at depths of 30, 60 and 85 feet.

On the 30-foot level a drift has been driven West 70 feet on vein and East 20 feet also on vein. On this level the vein is about 2 feet wide, assaying from \$12.00 to \$15.00 gold, per Mr. Hagan.

On the 60-foot level a drift was also run West 70 feet on vein and East 20 feet on vein. In the West drift the ore was stoped out between the same and the 30-foot level for a distance of 40 feet on vein and 12 tons of shipping ore were removed and marketed, with an assay value hereinafter set forth.

On the 85-foot level a drift was run West 40 feet on vein; but no drifting on vein was done East of shaft. The West drift mentioned was connected with the 60-foot level above by means of a raise in ore, a part of which was also marketed. Width of vein on the 85-foot level ranges from 14 inches to 20 inches. Vein material here assays around \$20.00 gold per ton, per Mr. Hagan. I took samples from this level, as well as from the other levels referred to and all of these samples showed free gold by panning. We also panned samples from surface pits sunk on vein and these also showed goodly quantities of coarse free gold; some of these samples being taken from grass roots.

DEF RTMENT OF MINERAL RESOURCES STATE OF ARIZONA FIELD ENGINEERS REPORT

Mine FLOWER GOLD - 6 unpatented claims Date April 1, 1941

District Copper Basin District, Yavapai Co. Engineer Elgin B. Holt

Subject: BRIEF REPORT

OWNER: L. J. Hagan, P. O. Box 55, Skull Valley, Arizona.

METALS: Gold and silver; mainly gold.

LOCATION: Property is located 5 miles SE of the Skull Valley store and post office, at an approximate elevation above sea level of 5,400 feet. The U. S. Navy mine, which has produced considerable zinc-silver ore, is located 1/2 mile south of this property. A county maintained road connects mine with Skull Valley.

GEOLOGY: The surrounding country rock for miles around property consists of granodiorite, which has been intruded by pegmatite, rhyolite and other igneous dikes.

VEINS: The Flower Gold group of claims is traversed by four parallel veins, about 600 feet apart, striking east and west; dip 70 degrees north; also by one North-South vein and another vein striking N.W. & S.E. Free-milling gold ore is found in all of these veins in outcroppings thereof.

DEVELOPMENT WORK: Work on property is confined to the main East-West vein on Flower Gold claim No. 1. This work is described briefly as follows:

MAIN SHAFT was sunk on slope of vein to a depth of 85 feet, with three levels run at depths of 30, 60 and 85 feet.

On the 30-foot level a drift has been driven West 70 feet on vein and East 20 feet also on vein. On this level the vein is about 2 feet wide, assaying from \$12.00 to \$15.00 gold, per Mr. Hagan.

On the 60-foot level a drift was also rum West 70 feet on vein and East 20 feet on vein. In the West drift the ore was stoped out between the same and the 30-foot level for a distance of 40 feet on vein and 12 tons of shipping ore were removed and marketed, with an assay value hereinafter set forth.

On the 85-foot level a drift was run West 40 feet on vein, but no drifting on vein was done East of shaft. The West drift mentioned was connected with the 60-foot level above by means of a raise in ore, a part of which was also marketed. Width of vein on the 85-foot level ranges from 14 inches to 20 inches. Vein material here assays around \$20.00 gold per ton, per Mr. Hagan. I took samples from this level, as well as from the other levels referred to and all of these samples showed free gold by panning. We also panned samples from surface pits sunk on vein and these also showed goodly quantities of coarse free gold; some of these samples being taken from grass roots.

ORE SHIPMENTS: Mr. Hagan furnished me with the following data concerning shipments of ore from the Flower Gold property during recent years:

ORE SHIPMENTS: Mr. Hagan furnished me with the following data concerning shipments of ore from the Flower Gold property during recent years:

Tons	Purchaser	Gold	Silver Total	val. per ton
			None we see see the set of the s	
0.91	H. C. Smoot	- 48.94	\$2,48	51,42
1.08	H. C. Smoot	- 19.91	none	19.91
0.97	H. C. Smoot	- 21.20	none	21.20
3.00	Vivian Mng. Co	- 60.00	none (approx.)	60.00
1.00	H. C. Smoot	84.36	none (approx.)	84.36
1.59	H. C. Smoot	- 51.52	2.54	54.06

REMARKS: The above shipments came principally from the main shaft workings referred to; but a part of same were extracted from open cuts and other shallow workings on vein, which is traceable on surface, showing values all the way along, where the vein has been uncovered, for about 1,000 feet in length.

CHARACTER OF ORE: Oxidized ore, carrying free gold, is found in vein to the 85-foot level of mine. On this level, however, bunches of ore containing iron pyrite are found, indicating that sulphide ore will come in with greater depth.

WATER: Two springs on property would provide water for mining and camp use. But water sufficient to supply a 50-ton mill would have to be pumped from the Copper Basin district, about two miles from property, with a lift of around 125 feet.

PROPOSED EXPLORATORY WORK: Mr. Hagan is now arranging to make application for a \$20,000.00 loan from the Reconstruction Finance Corporation, with which to carry out the following work, more or less:

Sink the main 85-foot shaft an addition depth of 200 feet on vein. This shaft would be timbered and have two compartments. The total cost of sinking this shaft would be around \$31.00 per foot.

After this shaft is completed, Hagan proposes to run two levels, or drifts, on vein: One at a depth of 185 feet from collar of shaft and the other at bottom of shaft. All in all, he plans to do about 1,000 feet of drifting at a total cost of \$10.00 per foot.

I believe this work is well planned and I do not hesitate to recommend the carrying out of same, for I am confident if this work can be completed, a considerable tonnage of milling ore of excellent grade will be uncovered.

IN CONCLUSION, I believe the property under discussion has enough merit to warrant the expenditure of at least \$20,000 to be spent in carrying out the work, more or less, as above outlined.

Elgin B. Holt, Field Engineer.
