Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

FIELD ENGINEERS REPORT

Mine Goat Camp Claims Date January 21, 1960
Pinal County
District Ash Creek (3 miles SE of Hope Metals) Engineer Lewis A. Smith
Saddle Rock Dist. (In Apache "Strip")
Subject: Interview with Joe Bidtich of Winkelman.

Owners: Joe and Albert Bidtich, General Delivery, Winkelman.

Claims: 5 unpatented

Location: T. 5 S., R. 17 E., Sec. 18 (approx.)

Work: Developed by a cut 40' long, 25' deep at face and 4-5' wide, plus several pits.

Geology: The mineralized area lies along the footwall of a diabase dike or sill. The ore from the big cut runs 0.3% in copper, 0.04 oz. in gold and 1.75 oz. of silver. Ten general samples averaged \$2.50 to \$5.75. An iron gossan overlying part of the zone shows up to 7 oz. of silver. The diabase dike or sill dips between quartzite and limestone. Chrysocolla and horn silver with some pyrite, below gossan, are well disseminated in the diabase. Some mineralization penetrated into the limestone. The pyrite content appeared to be high in the specimens observed. Most of the pyrite appeared to be cupriferous to a variable degree.
