Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

DEPARTMENT OF MINERAL RESOURCES
STATE OF ARIZONA
FIELD ENGINEERS REPORT

Mine Goose Egg Date October 7, 1959
District Green Valley, Gila County Engineer Lewis A. Smith
Subject: Reported by Henry F. Haught , Box 372, Payson, Arizona

Owner: Henry F. Haught

Location: 2 miles or less east of the Hillside (approximately T. 11 N., R. 12 E., Sec. 36)

Work: One 10' pit

Geology: A "fale" band which trends EW and which traverses a dark granitic rock, believed to be diorite. A strong "bull" quartz vein or "dike" parallels the "talc" zone. Much quartz float of different character than the "bull" quartz, is found over much of the claim. This is strongly stained by iron oxides and carries gold. The source of this quartz is not known, and it is hoped that a proposed bulldozer trench will disclose the origin of this float. Haught reports that two samples showed \$50.00 and \$25.00 per ton, taken from the float piles. He discounted the high grade sample as being a happenstance. He also stated that as far as he could tell the float did not extend much past his claims. The float varied in size up to 200-250 pounds and is angular, no rounding being observed.
