ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

GREEN CUP CLAIM

YAVAPAI

Garry Lee Tiffany was in for results on rocks sent to the Arizona Bureau of Mines. A letter from Bob O'Haire is attached. The samples are from Mr. Tiffany's Green Cup lode claim near Bumblee Bee. He is receiving some grubstake help from Ernie Stevens. His veins run from 14" to 24" wide and contain visible gold in quartz. KAP WR 3/13/74

Went to Bumble Bee and met Garry Tiffany who showed his Green Cup unpatented claim in S c. 29, T10N, R2E about 1½ miles west of the village of Bumble Bee. Here a 10"-18" quartz vein strikes N20°-25°E and dips 75° west in granite near a schist contact. Near an old 40 foot inclined shaft, Mr. Tiffany has uncovered the vein which here contains an appreciable showing of galena as well as free Au in hematite veinlets in gray quartz. The vein is traceable by a few outcrops for perhaps 250 feet. Mr. It was suggested he trench the vein at 20 foot intervals and then I would return and sample it for him as he is very amateur. GW WR 3-18-74

Gary Tiffany was in with more samples from his claims near Bumble Bee. He has been crushing and panning samples of his rock and is finding encouraging amounts of gold. He had some hand picked galena bearing samples assayed. Results showed 3 oz. Ag/ton. He mentioned that Glen Walker had visited his claims and told him where and how to sample. He has staked two more claims on what he hopes is a continuous vein. His claims are named the Green Cup, Copper Cup and Brown Cup in Sec. 29 & 32, T10N, R2E. KAP WR 3/25/74

m Gary Tiffany was in to tell that he has formed a partnership with Ralph M. Gray of the Pope Black Canyon City Ranch. KAP WR 4-4-74

Garry Tiffany of Phoenix who has been prospecting on a foot wide Au quartz vein about a mile west of Bumble Bee came in to discuss his future plans saying he would have to quit prospecting and find a job as he is flat broke. Names of three or four people who have been prospecting and without much luck were given him to contact for a partnership arrangement. GW WR 5-8 74

As opposed to abandoning these claims, Mr. Tiffany gave the claims to Earnie Stevens, 1243 E. McDowell Road, Phoenix, 85006, 253-9335. Spring of 1974

MEMORANDUM FOR FILES

Subject: Garry Lee Tiffany - Office Interview on May 1, 1980

Gave Power of Attorney to Ernie Stevens to sell his Green Cup Claims.
Nothing was done and claims were let go. Mr. Tiffany relocated the
claims in 1979. He had two partners on the location notice, a Mr.
and Mrs. Brown who live in Southwest Phoenix. Mr. Tiffany wants to
sever the partnership but is having difficulties. He stated the
map location is 300 feet off from the ground location. He intends
to locate on top of existing claims and the 300 feet in question.

Ken Phillips
Department of Mineral Resources
Mineral Building, Fairgrounds
Phoenix, AZ 85007

Dear Ken:

Sample No. 54726

The sample submitted to the Arizona Bureau of Mines for examination is predominantly specular hematite with a little quartz, orthoclase, clay minerals and limonite.

Gold and silver were not detected by microscopic and visual spectroscopic analyses. However, 34 parts of precious metals per million, which is equal to approximately 1 troy oz. per ton, cannot always be detected by the routine laboratory procedures we render. The Arizona Bureau of Mines does not engage in making quantitative assays. Quantitative fire assays can detect economic quantities of precious metals and if this type of service is desired, sample should be sent to a commercial assay office. We are enclosing a list of commercial assayers for your convenience.

I sincerely hope this information is of help.

Yours very truly,

Robert T. O'Haire
