Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

HORN CLAIMS

MARICOPA COUNTY

KAP WR 5/15/87: Phil Chubb, a geologist working for Superburn Systems, Vancouver BC reported he is investigating a green stone property in the eastern end of the Harquahala Mountains that had been submitted to them by Floyd Bleak (card) as a landscape rock deposit. The only claims in the area belonging to Mr. Bleak are the Horn Claims in Sec 26, T5N R9W. He was interested in any geologic mapping of the area as well as any other information. Suggested he talk with the BLM regarding a plan of operations for a decorative stone property so as to make sure there would not be any "common variety" type of problems. He felt the deposit was likely chloritically altered zone. The surface exposure is about 100 feet wide and can be traced fro 750 feet on the surface. He came in later in the week to review mine files in the area.
