ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

Re: Collom, House and Hulse Mines, Gila County, Arizona

Dear Mr. Berger:

Thanks for the recent inquiry regarding the above referenced mines in Gila County. As we understand your request, the Tonto National Forest is investigating closing public access to these historic mines for health and safety purposes. The Arizona Department of Mines and Mineral Resources (ADMMR) has reviewed available information and enclosed copies for your use. Based on the available files, the there appeared to be over 3000 linear feet of underground workings in the Collom Mine. We have included a copy of a map showing the relative locations of the workings. Records from 1940 indicate that at that time, the mine was over 40 years old; that the workings were a source of water, and that the shaft had partially caved.

Should you have any questions or need additional information, please contact me at your earliest convenience.

Sincerely,

Willis D (Doug) Sawyer
Director
Arizona Department of Mines and Mineral Resources

BLUE BIRD MINE
aka: HOUSE MINE
BANDTAIL MINE
SILVER BUTTE MINE

Gila County
Green Valley District

SW¼ of Sec. 32.and SE¼ of Sec. 33, T1ON, R9E.

KAP WR 7/11/80: Mrs. Patty Phillips reported that Mr. J.C. Duffey and Bill McCarver have purchased the House Mine which is also known as Blue Bird Mine and Bandtail Mine and can also be known as Silver Butte Mine in Green Valley District, Gila County. The claim group which is to be known as Bandtail, consists of 15 claims in the SW¼ of Sec. 32 and SE¼ of Sec. 33, T1ON, R9E. The new owners plan a cyanide leach plant to recover silver. In a later meeting the same day with Mr. Duffey and Mr. McCarver, some of the details and problems of cyanide leaching were discussed.

KAP WR 5/1/81 C, Edward Karst, P.O. Box 188, Payson, Arizona 85541, Ph: 445-2778 and 1130 9th Street, Alexandria, Louisiana 71301, phone (Home) (318) 487-0737, and (office) 318/448-1600, was in the office, in the company of J. C. Duffey. Mr. Karst was investigating the potential for investing in the development of a cyanide heap leach operation at the House Mine. The property was later known as the Band Tail. A limited number of samples have high silver values. Gold and copper content might also be significant. A one page report had been done by Green Bluff Copper Mines Ltd., 107-691 Thurlow Street, Vancouver, British Columbia V6E 3L9, under the direction of a Peter W. Laczay. A one page progress report by Green Bluff was obtained for the file. Included was an assay certificate which had been altered. The original assays had been done for a Gold Angel Mining Company, however, A Green Bluff Copper Mines Ltd. had been typed in the address block on the certificate. There is no way of knowing if the samples came from the House Mine. It was suggested that Mr. Karst hire a consulting engineer.

PROGRESS REPORT:

The following is a progress report on the Band Tail Prospect, near Payson Arizona, U.S.A as per recommendation of its Consultant, Peter W. Laczay, B.A.Sc., P. Eng.

Several old workings showed what appeared to be fairly high grade mineralization consisting of galena, tetrahedrite, chalcopyrite and secondary copper carbonates, malachite and azurite.

The Samples taken were assayed at the Iron King Assay office at Hunbolt, Arizona. These assays confirmed the high grade nature of the mineralization and a copy is included with this report:

	Gold (oz/Ton)	Silver (oz/Ton)	Copper
P.M.13.10.76.1	0.104	73.68	1.99 (grab)
P.M.14.10.76.1	0.030	26.21	0.73 (18" channel)
P.M.14.10.76.2	0.050	48.25	1.55 (grab)

Bulldozer work, utilizing a D-6 machine was undertaken on the Band Tail claims about 5 miles of access road were rebuilt and 1.5 miles of new access roads were constructed during the month of September, 1976 through January, 1977.

Stripping of a zone containing several mineralized veins were completed and three diamond drill sites were leveled and graded.

An attempt was made to de-water an old adit collared in an alluvial deposit below the mineralized zones, but examination showed a large cave-in about 450 feet from the mouth had occurred, and work was suspended pending a decision whether timbering and re-excavation are warranted.

Two shallow drill holes, the first 250' and the second 194 were drilled at 55° angle in an attempt to test the vein structure in the host volcanics and cherts.

In both holes, small mineralized veins, containing azurite and tetradedrite, about 2" to 6" wide encountered indicates that there is a potential for mineralization at depth.

The drill program should be carried out with core drilling for the Silver mineralization at depth with at least one drill hole to a depth of some 800 feet vertically and the remaining drill holes to a fabourable depths based on information obtained from the 800 foot deep drill hole.

Your Company is negotiating, aquiring, Gold and Uranium properties.

Over the nine month period we have been working on the Band Tail prospect" we have had considerable success. We extend our appreciation to our employees and management for their unselfish efforts in helping us to our common goal. We also wish to assure our shareholders that we will continue in our efforts to serve their interest.

Respectfully submitted,
ON BEHALF OF THE BOARD OF DIRECTORS

A. Hewison

DEPARTMENT OF MINERAL RESOURCES
STATE OF ARIZONA
FIELD ENGINEERS REPORT

Mine HOUSE MINE (Cross reference) (Blue Bird Claims) Date March 6, 1956

District Mazatzal, Gila County Engineer B. J. SQUIRE

Subject: Activity Report

The House Mine was relocated as the Blue Bird Claims in Sept. 1955 by Earl Chipley and Sam Dudley for the Big Bear Mining Company, 5607 N. 33rd Avenue, Phoenix.

The Property consists of 12 unpatented lode claims in S4T9NR9E unsurveyed and lie south of the Dennison Claims and north of the old Collum Property on the east flank of the Mazatzal Mountains.

Geology and Mineralization - The copper was associated with highly altered Monzonite porphyry dikes in a precambrian complex. The grade of ore on the outcrops and in the dumps of the extensive old workings is not too high. The owner reports higher grade in workings which at time of my visit I did not reach.
