## **ACCESS STATEMENT**

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

## **CONSTRAINTS STATEMENT**

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

## **QUALITY STATEMENT**

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

MARK GEMMILL

MINE PROSPECT

OWNER Thomas Sutcliff  
&  
L. J. Ros s

Adress, Cheery, Arizona.

JUDGE MINE  
VERDE DISTRICT

This property consists of 12 mining claims, situated on the east slope of Black Hills, and about 10 miles south of Clarkdale and 6 miles North East of Cheery.

The claims are all locations and title has been held by assessment work and recording the same.

The camp on the property can be reached by auto but to get to the workings one has to walk over a brushy trail for about  $1\frac{1}{2}$  miles.

The formation is the Bradshaw Granite with small veinlets of quartz none of which are more than one foot thick. The property seems to be along the Verde fault and the formation naturally is much broken up, but even then there are no well mineralized and defined fissures.

The property has no shipping record and it looks doubtful if it ever will have. There is about 500 pounds of carbonate copper rock on one of the dumps on top of the ridge which appeared to have come from a small quartz veinlet that shows in an old location shaft, which is now filled up.

Down the side of the hill the owners have started to drive a tunnel in under what showing there is, and this tunnel is in now about 120 feet in following a small dry seam in decomposed granite.

The owner is positive that by driving the tunnel another 15 feet, a large vein will be cut which will lead them to a very large copper deposit. They were wanting a Government loan to carry this work through.

I advised that more showing of ore and mineralization would have to be developed before they could hope to get any consideration for the development loan, and pointed out that the loan was not for prospecting purposes.

Signed *A.C. Nebeker*
