ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

ARIZONA DEPARTMENT OF MINES AND MINERAL RESOURCES

VERBAL INFORMATION SUMMARY

1. Mine file: 1. KING SOLOMON 2. RATTLER GROUP

2. Mine name if different from above:

3. County: Yavapai

4. Information from: Russ French

Company: Owl Springs Ranch

Address: P.O. Box 1237

Wickenburg, AZ 85358

Phone: no phone

5. Summary of information received, comments, etc.:

Mr. French reports he has leased the King Solomon with an option on a portion of the Rattler Group to Gold Lake Mines Inc USA, 8405 W. Forest Home Ave., #202, Milwaukee, WI 53228, phone 414-425-6800, WATTS 800-747-4653, Gerald Starr, President. Per Kjeldas, 705 Windermer Dr., Minneapolis, MN 55441 is another principal in the company. The lease is for 4 years and includes a 7½% net smelter royalty with a monthly minimum.

Date: October 19, 1988

Nyal J. Niemuth, Mining Engineer

ARIZONA DEPARTMENT OF MINES AND MINERAL RESOURCES

VERBAL INFORMATION SUMMARY

1. Information from: Russ French (c)

Company:

Address:

2. Phone:

3. Mine: KING SOLOMON

4. ADMMR Mine File: King Solomon

5. County: Yavapai

6. Summary of information received, comments, etc.:

Redtail Mining (c) has recently completed a detailed sampling of the main adit level of the King Solomon. When assay map is complete, a copy will be made available for the file. Preliminary results indicate average grades over the vein width in excess of 0.1 oz/ton Au with a trend of higher values to the east near the intersection with caved shaft. No lease has been signed on the property.

A lease has been agreed to with the BLM's Geologist Training School. It is not exclusive and will not preclude lease of the property for mineral development.

Date: September 15, 1988

Nyal J. Niemuth, Mining Engineer

KING SOLOMON

YAVAPAI COUNTY

NJN WR 3/11/88: John Rudd (card) reported that Redtail Mining has been sampling the adit level of Russ French's (card) King Solomon (file) Yavpai County. They hope to produce 2,500 tons from the adit level which will then be processed at the Redtial Millsite.

KAP WR 5/10/85: Jim Roy Weatherby (c) reported he had made a visit to a mining property recently acquired by H. Russell French, the King of Solomon. We have a reference card on the King Solomon Mine and some information on it included in the Camp B Mine file. Mr. Weatherby reported that he feels the King Solomon will still produce some high grade ore and is an excellent property for a small mining operation.

NJN WR 12/13/85: Russ French (c) visited and reported that he is mucking out a cave in on the main level of the King Solomon Claim (c) (Camp B Group-file) and may have to spill to get thru it. After getting the level safe and open he plans to sample it for gold as he reports seeing some areas with visible gold.

KAP WR 8/1/86: Russ French reported that he has completed sinking a water well at his King Solomon Group property (Camp B Group) file. The well is 500 feet deep and makes only 2 gallons per minute.

KSP ET 7/4/80: Rus French reported that he visited King Solomon Mine equipment yard at Wickenburg where he observed that the principals of the mine were loading two rail cars of ore which they reported would be shipped to Douglas.

KAP WR 7/11/80: King Solomon Mine, Blue Tanks District, Yavapai County has shipped approximately 250 tons of siliceous copper-silver-gold ore to the Douglas Smelter. The shipment of three cars were overloaded and are sitting at the Mobest Siding, waiting for the loads to be redistributed into a fourth car.

KAP WR 8/15/80: Russ French reported that the King Solomon Mine shipment which had been sidetracked at the Santa Fe RR Mobest siding, has been shipped to an unknown mill-smelter (?) in Nevada. A contractor is reported to be mining rock from an open cut at the King Solomon property and the material is being hauled off to an unknown destination in semi-trucks.

NJN WR 12/28/84: Russ French visited and reported he has purchased the King Solomon Mine (c) Yavapai County consisting of 4 patented claims comprising 71 acres. Sadly his plans are to plant pine trees and build a house there.

KAP WR 5/10/85: Jim Roy Weatherby (c) reported he visited the King Solomon Mine recetly. Mr. Weatherby reported he feels the King Solomon will still produce some high grade ore and is an excellent property for a small mining operation.

KAP WR 1/2/86: Russ French (c) reported that he is in the process of moving from Glendale to the house he is constructing on the King Solomon Mine (file) Yavapai County. He has established a Wickenburg post office box, P O Box 1237, Wickenburg, Arizona 85358. At the present time he may be reached by phone at Ray Lumber, 245-6763. They have given the name Owl Springs Ranch to the mine. I visted the property briefly and examined the underground workings on Saturday with Mr. French. He has been cleaning out the long tunnel at the area of a cave near the old shaft. This drift is on a 45° north-dipping quartz vein with widths up to 4 feet that carries free gold but averages less than .1 oz/ton Au.

August 23, 1989

Mr. Ken Phillips
MINES & MINERAL RESOURCES DEPT.
Mineral Bldg. Fairgrounds
Phoenix, AZ 85007

Dear Ken:

It is with heavy heart that I must tell you my husband, Russ, passed away on August 2 of a massive coronary. I know you were good friends and he always enjoyed visiting with you.

I will remain here on the Owl Springs Ranch, and will try to lease the 10 BLM claims which Russ has retained. I will also pursue the possibility of leasing the King Solomon group, should some high roller come along. Seriously, if you cross paths with anyone interested in leasing our claims or working the Solomon, please forward their names.

I will be spending some time between Tempe and Wickenburg for the next few months--taking some courses at ASU--but my son, Sam, will be moving back here to the ranch, so you will still have access to us, provided we know when you will be coming. I can be reached at 955-4508 on those days I'm in Phoenix, or a message can be left for me there.

Come see us if you ever get out Wickenburg way.

Sincerely

Phyllis

AUG 30 1988

Mr. Howard R. French
P.O. Box 1237
Wickenburg, Arizona 85358

Dear Mr. French:

Since 1969, the BLM Phoenix Training Center has been training mining engineers and geologists to become mineral examiners who evaluate all types of mining claims and locatable mineral deposits for the Bureau of Land Management, U.S. Forest Service, and National Park Service.

We are looking for a new field site for a 4-day mining claim examination training exercise. Matt Shumaker, the Locatable Minerals Coordinator at the Phoenix Training Center recently contacted Nyal Niemuth at the Arizona Bureau of Mines and Mineral Technology in Phoenix. Mr. Niemuth and Matt discussed a number of possible sites. Two properties that he suggested were your King Solomon and Rattler group of patented and unpatented mining claims. From Mr. Niemuth's description of your properties, they seem to have promise at being what we need. What we are looking for is a mineral property at least the size of four lode mining claims with several short adits in fair to good condition. There should be some minor to large surface workings, plus some visible mineralization which need not be major.

We prefer to conduct the training exercise on private or patented land to prevent any appearance that our training exercise is a real validity examination.

Our basic course in the subject is six weeks long, and is conducted once or twice a year. The course includes a number of topics, such as mining law, underground mine mapping, writing mineral property reports, ethics and professionalism, mineral economics, sampling, assaying, and cost estimating for very small mines.

The course requires that the trainees actually map and evaluate a mineral property. The trainees prepare a map of the surface and underground workings. Each trainee is then asked to select several sites where they would collect samples if this were an actual property examination. The Phoenix Training Center staff then prepares "mock" assay results for them. These "mock" assay results are not based on actual values present, but on current market prices and mining costs and are designed to test the students' skills in economic evaluation. The trainees then prepare a mineral report, and defend it in a "mock" hearing.

We have used a mineral property near Casa Grande, Arizona for about 11 years. Unfortunately, the mineral property near Casa Grande may no longer be available to us.

If you are agreeable to the idea of allowing BLM to use your property once or twice a year for a training exercise, Matt would like to meet with you soon. He can visit you in Wickenburg or at the property, as you prefer. If your property seems to meet our needs, Matt can discuss the possibility of obtaining your permission to use it for our training program. The staff and trainees would all be on duty while on your property, and would be covered by worker's compensation insurance. We could also provide you with a release of liability.

Our next 6-week mining claim examination course will begin on October 3, 1988. The final field exercise is scheduled for October 25-28. We don't know if our site near Casa Grande will be available. We would appreciate it very much if you can find the time to meet with Matt. You can contact Matt by mail using the enclosed postage-paid envelope, or by telephone at (602) 241-2651. You are welcome to call collect. If Matt is not in the office, Mr. Burrett Clay, his immediate supervisor can answer any questions you might have.

Our locatable mineral training program is important to the BLM. We would appreciate your help. We hope to hear from you soon.

Sincerely,

♣ Larry E. Hamilton

King Solomon Mine (old)

GOLD LAKE MINES, INC.

AUGUSTA GOLD MINES, LTD.

SUITE 202, 8405 W. FOREST HOME AVENUE, MILWAUKEE, WISCONSIN 53223
TEL: 414-425-6800 FAX: 414-425-4358 TELEX: 6503497076 (GLM-AOM)

JANUARY, 1989

Dear GLM Shareholder:

As the new year begins, I look forward with a spirit of optimism that 1989 will see your Company make significant progress toward the goals which have been set for it. However, in all candor I must also admit to some frustration over the fact that several tasks have proceeded more slowly than expected.

As I am sure is apparent, the examination process to which your Company is being subjected in connection with the S.E.C. registration of GLM shares has proven to be much more time-consuming than had been anticipated. In the past, your management has from time to time furnished you with its good faith estimates as to the date by which this task was expected to be completed, based upon the best information available at the time. Invariably, subsequent developments have proven these estimates to be optimistic. An independent examination is, by definition, something which management does not control, direct or limit; the process must run its course.

However, we firmly believe that you, the GLM Shareholder investor, will be the ultimate beneficiary of this one-

time, in-depth independent examination of your Company from inception to date. Accordingly, I ask for your continued patience, and assure you that we are making and will continue to make every effort to complete the auditing and registration processes at the earliest feasible date. A meeting of the Shareholders will be announced as soon as the preparation of financial statements is completed.

On the operational side, 1989 holds considerable promise for your Company as we strive to establish an active, profitable gold-producing operation. I believe the items reported on in this newsletter reflect our continuing commitment to assemble the human and physical resources required to achieve that end.

kindest regards

Gerald R. Starr
President

ARIZONA SUBSIDIARY FORMED TO DEVELOP NEW CLAIM GROUPS

A newly-formed Arizona corporation, Western Star Mining Corp., has been established as a subsidiary of Gold Lake Mines, Inc., which owns 100% of Western Star's common stock.

GLM has assigned to the new corporation all of its interests in two newly-acquired Arizona claim groups, known as the Burro Creek placers and the Rattler Mine, discussed below. Western Star will serve as the vehicle for the funding and development of these properties. Officers of the new corporation are President Gerald R. Starr, Vice-President Allan L. Ancel, Vice-President, Secretary and Treasurer Per M. Kjeldaas, and Assistant Secretary Kari L. Luedtke.

PILOT GOLD PRODUCTION PROGRAM PROCEEDS ON ARIZONA PLACER CLAIMS

Preparations are underway for the commencement by GLM subsidiary Western Star Mining Corp. of a pilot gold production program on a group of Arizona streambed placer claims. The target property consists of a group of three leased unpatented claims straddling Burro Creek in a remote portion of Mohave County. Lease rights have also been acquired on two mill sites adjacent to the placer claims. These mill sites contain several buildings which will be used in connection with the planned operation.

Project manager William Buchmeier will supervise the operation, which will employ an eight-inch suction dredge mounted on a floating platform. Streambed material will be carried to the surface through a suction hose, where contained gold will be recovered in a sluice box located on the dredge platform. The dredge is currently under construction in the State of Washington to Western Star's specifications, with delivery to the Arizona site expected during January. Production is scheduled to commence shortly thereafter. Pending delivery of the dredging equipment, preparatory work is underway to secure all necessary governmental permits, and to refurbish an existing building to serve as living quarters for the crew.

A sampling program conducted on the property during November employing a small testing dredge disclosed the presence of gold in the streambed material. However, the sampling equipment was capable of processing only a small quantity of gravel. These inherent limitations in the testing process preclude the formation of any judgments concerning the property's full commercial potential. Such conclusions must await the arrival of the large dredge and a fair test period of full-time production operations.

MINERAL RIGHTS ACQUIRED ON RATTLER (KING SOLOMON) MINE

The Rattler Mine consists of four contiguous patented mining claims known as the King Solomon, Queen of Sheba, Queen Esther and Vashtai, lying approximately ten miles from Wickenburg, Arizona. GLM acquired the mineral rights on the property in October. Agreement has been reached to include an additional nearby block of ten unpatented claims in the lease, which has been assigned by GLM to its new subsidiary, Western Star Mining Corp.

The Rattler Mine has considerable history behind it, having been patented in 1910 after many years of operation before that date. The patent maps indicate extensive underground workings, including a 570' decline, over 1,700 feet of drifting, and some cross-cutting. Access to the workings is limited by two major cave-ins, allegedly the result of sabotage blasting during a personal dispute involving a prior owner many years ago.

An examination of the property and of the accessible workings was conducted by GLM Chief Geologist David B. Doan. GLM also commissioned an inspection of the property by

Mr. Walter J. Smit, a professional mining engineer. Based upon preliminary reports resulting from these examinations, plans are being made by Western Star for an extensive sampling and assaying program, both on surface and in the accessible underground workings. If results warrant, consideration will be given to gaining access to the extensive workings currently not accessible, to determine the full potential of the mine.

WILLIAM M. BUCHMEIER PLACED IN CHARGE OF ARIZONA PROJECT DEVELOPMENT AND MANAGEMENT

Mr. William M. Buchmeier has become associated with GLM to oversee the development of its Arizona properties. Under the auspices of Western Star Mining Corp., he will also serve as project manager for the Burro Creek dredging operation and will be directly involved in the development of the Rattler Mine.

Mr. Buchmeier, who will operate out of Wickenburg, Arizona, has over twenty years of "hands on" mining experience in the Southwestern U.S. He has worked at all levels of mining operations: as a miner, shift boss, mine foreman and mine superintendent. He has also done con-

sulting work, has developed his own mining properties, and has been certified in mining safety and as a licensed blaster. Mr. Buchmeier thus brings a wealth of mining experience and knowledge to your Company, which will be fully utilized in developing our existing holdings and in identifying new prospects.

**AUGUSTA GOLD
MINES, LTD. ADDS TO
MANITOBA HOLDINGS**

GLM subsidiary Augusta Gold Mines, Ltd., has purchased a key claim in its continuing program to "group" owned claims into contiguous blocks. The Richard 1 mineral claim, which completely surrounded AGM's Mel (Moose) mineral claim, was acquired in a transaction completed in October.

In addition to surrounding the Mel claim, the Richard 1 also abuts AGM's Lynne and Lynne 2 claims. With this acquisition, the Mel, Richard 1, Lynne and Lynne 2 claims together comprise a single parcel of some 1,563 acres, containing three shafts.

It is believed that this parcel is a very attractive exploration target. AGM's ownership of the entire block permits a single comprehensive exploration program to be developed to cover all of the claims.

**KARI L. LUEDTKE
JOINS GLM
OFFICE STAFF**

Miss Kari L. Luedtke has joined the GLM home office staff as an Administrative Assistant. Kari attended Concordia College in Wisconsin, and has several years of experience as a secretary, legal secretary and bookkeeper. Her computer experience and knowledge has also allowed her to undertake a number of projects on GLM's computer equipment, including the formatting and preparation of this Shareholder Report.

We look forward to Kari's assuming a major role in home office administration.
