ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

FROM: J. M. Ennis

Trip to Leadview property with Mr. Munez, Mr. Barrios & Russ Williams.

Located approximately $1\frac{1}{2}$ miles in a Southerly direction from the Goswick ranch on left fork of Big Bug Creek.

Russ Williams & myself met Munez and Barrios at Poland Junction at 9:00 A.M. We all rode in pickup to Leadview mining property arriving about 9:20 A.M.

The first shaft we saw was reported to be about 45 feet in depth. This was a one compartment shaft about 5'x5', the timber still intact with ladderway. Didn't have rope so did not enter. According to Mr. Munez the vein at the bottom was $1\frac{1}{2}$ ft. to 2 ft. wide, lead, silver & gold ore. (Earlier samples taken by Munez and Barrios from specimens from dump assayed 56: Pb, .01% Zn, 12.8 Ag, .03 Au. with 33.6% of the lead non-sulfide.)

Located about sixty feet in a North Westerly direction from the first shaft mentioned, another shaft said to be about two hundred feet in depth. This shaft about a 6'x8'. Timber has rotted out and vein can be viewed on both sides from the collar, down to a distance of about 20 or 30 feet. Average width of vein about 20 inches of what can be seen.

Mr. Munez thinks the vein to be about 3 ft. wide at the 200 level as told to him from some other source.

Vein between two shafts running North 40° East. 83° dipping to West.

Then proceeded on foot from these two shafts in a south-westerly direction to the divide between Big Bug & Grapevine Creek. Were shown two quartz blowouts on this ridge.

Then topped over ridge about two hundred feet on Grapevine side, Monument located here and more quartz float, no vein found as yet.

Took sample of footwall, hanging wall, waste specimens from dump, ore specimens from dump & of quartz from Grapevine Creek. Sample of quarts being assayed for Gold & Silver.

Seven claims staked on the Leadview. Three claims on the Crystal Copper, these are adjoining the Leadview claims.

Back to Iron King 1:00 P.M.
