... FACTS AND FIGURES ...

ARIZONA'S BIGGEST GOLD CAMP

FOR 1914 the production of gold in Arizona was \$1,500,000. The Tom Reed-Gold Road district produced 40 per cent of that sum. During the same year the Tom Reed alone paid dividends amounting to \$627,592.95, or 69 per cent, on its issued capital, a record not equaled by any other gold mine in the United States.

It is conservatively estimated at the present time that there is in sight in the three or four developed mines of the district not less than \$20,000,000 in gold ore.

The district is approximately ten miles long by seven miles wide, and with the number of new properties under development, the present year should see millions added to the above estimate.

The District Has:

Telegraph and Telephone

Electric Light and Power

Daily Auto and Mail Service
(From Needles, Cal., 20 miles; or Kingman, Ariz., 26 miles)

Good Hotels, With Ample Accommodations

R/H

ENGINEER'S REPORT

In submitting this report I desire to state that I am entirely conscientious and uninfluenced by reason of my connection with this company, or my interests in its welfare. My findings being precisely the same as though acting in a professional manner for a fee, and I can only ask that I be given credit for honesty and integrity in the below rehearsal of facts, as I find them.

LOCATION AND DESCRIPTION OF PROPERTY

The property is located about 7½ miles west of Oatman, directly on Silver creek. It consists of six full size lode mining claims of 600 feet in width by 1500 feet in length each, or approximately 120 acres. All requirements of U. S. mining laws have been fully complied with and the property entirely free of any incumbrance whatever.

TOPOGRAPHY

The topography is best described as being the foothills on the western

MANAGEMENT

Mr. R. V. LeGrand, president and manager, is a well-known mine operator and engineer of twenty-five years experience, former owner of the million dollar Mountain King silver mine in Nevada—the mine that produced \$850,000 in seven months time.

Mr. G. W. Jakle, treasurer, is manager of the Arizona Stores Company at Oatman, and is well and favorably known in commercial circles throughout the state as an active, efficient and successful business man.

Mr. Ernest Krohn, vice-president, is manager of the meat department for the Arizona Stores Company at Oatman and is recognized as a man of character and ability.

Mr. C. J. Hoke, secretary, is bookkeeper for the Big Jim Mining Company of Oatman, where he stands in the front ranks. Mr. Hoke has had over ten years of continuous service under the U. S. government, where he was connected with the inspector general's office. He was also treasurer for the Province of Bataan in the Philippines and special agent for the general land office for some years.

Announcement

OATMAN, ARIZONA, MAY, 1916.

TO THE PUBLIC:

We are today offering our first allotment of Treasury Stock to the public at **FIFTEEN CENTS PER SHARE**. A large part of this has been subscribed for in advance.

We will sell this first allotment on monthly installments, where desired. If, for reasons, you should fail to keep up your regular payment, you **lose nothing**, but will be given every share you pay for.

We wish to direct your attention to the fact that we are not engaged in cross-cutting for a ledge that may never be encountered, but that we are today sinking on a thirty-foot ledge that shows values between walls as follows:

\$1.03, \$1.65, \$2.07, \$2.48, \$3.19, \$5.79, \$7.13, \$33.44.

Some silver invariably accompanies the gold. Every expert and experienced miner will assure you this is a condition that bespeaks for permanency and deep-seated ore bodies.

We are appealing to those investors who look to "safety first"—a dependable and substantial stock where the physical conditions behind it are such as are necessary to make a mine worth while.

We feel that stock in a mine exposing such a tremendous tonnage of ore, with the most certain promise of good milling values, must of necessity become valuable.

We, therefore, advise you to buy it, and buy it while it is low.

We also desire to state that the president and manager of this property as president and manager of the Mountain King silver mine in Nevada sold the first allotment of Treasury Stock in the company owning the mine for fifteen cents a share and that the Mountain King made a million-dollar mine.

We hope history may repeat itself, and it looks as though it may.

GENERAL OFFICES

Oatman, Arizona

slope of the main Black range overlooking the Colorado river and old Fort Mohave. These hills have suffered considerable erosion, and while convulsions caused some irregularity in its outline, the surface is generally inclined to be even and rounded; mineralized zones are thus easily traced by surface markings.

GEOLOGICAL

CONDITIONS

The country rock is uniformly an andesite, and by that eminent geologist, Mr. F. C. Schrader, of the U. S. geological survey, termed a chloritic andesite by reason of its chlorine composition. This same andesite has thus far formed the reservoir for all the big bodies of ore and all the big mines in the district. It is highly silicious and therefore a natural repository for gold. Its extreme porosity also allowing free circulation for ascending solutions held in suspension by thermal waters. Exploration work only now beginning on the property, it can not be stated with absolute precision whether the vein system found on this hill be a series of true fissure veins or fissured andesitic dykes, mineralized by vein forming agencies. The vein

filling is a porphyretic quartz heavily oxidized. The hill presents the appearance of a network of mineralization, at times and places widening to extreme proportions, and the fact that values, low and high, are found throughout the area traversed by the fissuring is sufficient evidence to warrant the expectation that another big mine is in the making. The Arabian mine at Union Pass, one of the big mines of this section, presents a very similar condition as to veins and formation. Values running from one dollar to thirty-three dollars per ton have been secured from practically the surface outcroppings.

RESUME

The writer can only add that his opinion, based on the above outline of conditions existing on the property, is that there appears every reason to expect that development will make this one of the big mill propositions of the district, where tonnage can be reckoned with absolute certainty and chance eliminated, where fluctuations should be negligible.

Shaft sinking, under direction of the writer, has been started, after a systematic surface trenching of the whole property.

Respectfully submitted,

(Signed) R. V. LeGRAND,
Engineer and President.

authority, who has headed a financial syndicate for deep development in the camp, officially connected with the Miami Copper, the general development Kerr Lake Mining Co., president Naumkeag Copper Co. of Houghton, Michigan, and who opened the Tennessee Copper Co.: "Entire district pleasing to me. United Eastern ranks among the greatest gold mines on this continent. Am inclined to think there are a great many ore bodies that do not outcrop on surface."

C. H. James, of London, England, of international engineering fame, broad experience in South Africa, West Australia, India, China and elsewhere: "The greatest future of any camp in America. Will be center of gold producing section of United States."

Allen G. Burris, identified twenty years with Cripple Creek, president El Paso Beacon Hill Consolidated Co., and an investor in the Oatman district: "The district is a marvel. Am convinced it will record a production of gold in excess of Cripple Creek. Believe other ore bodies there equal to United Eastern. Mineralogical and geological conditions demonstrate wide distribution of precious metal values.

E. W. Brooks, an authority on ore occurrences and depositions: "The

value are doubtless awaiting discovery and development.

The Mountain King silver mine was purchased by the writer for \$50.00 and a bunch of stock. It produced \$850,000 within seven months time—one and a quarter million inside of two years, and was later bonded for one and a half million. The writer sold the first stock to the public at 15c per share.

The Goldfield Combination mine was purchased for \$75,000, and inside of one year was re-sold for three million.

Mohawk stock sold from 18 to 20 cents and inside of two years leaped to \$20.00.

WHAT THE ARIZONA CORPORATION COMMISSION HAVE TO SAY

The Hon. J. J. Jones, chairman of the above commission, after a thorough investigation of the district, before one hundred banqueters officially placed the stamp of approval on the methods of organization and operations in the Oatman field. He expressed himself in highest praise regarding the state of affairs, predicting

paid by banks, or even by railroads and banks combined.

TWENTY-FIVE YEARS OF PROSPERITY

The completion of twenty-five years of practically steady production for a mine is worth more than passing notice. The Bunker Hill at Wardner, Idaho, on September 10 last reached the twenty-fifth anniversary of its discovery. This famous lead-silver mine was discovered September 10, 1891, by H. S. Kellogg, Phil O'Rourke and a jackass. Tradition has it that the jackass was the real discoverer, or the real cause of the discovery. (By way of comment, the courts held this to be a fact, and awarded the owner of the jackass an equal one-third interest). Since the beginning of mining operations the mine has been a big paying proposition. On October 4 last the Bunker Hill, or Bunker Hill and Sullivan, paid dividend No. 217 of \$81,750, making a total to date of \$16,527,750, a record unsurpassed by any lead-silver producer. Although millions of dollars worth of ore have been taken from the upper levels, development at depth has opened enormous ore bodies. Other mines of as great

mineralized area appears to be exceptionally large, something like 25 miles, with a width of from two to five miles. True ore shoots at depth of 100 to 300 feet; many veins converging in all directions and converging to a common point."

Dr. Walter Harvey Weed, a mining engineer of international repute and author of many text books: "Some are doubtless true dykes fissured and mineralized by vein forming agencies, others are true fissure veins—both types worthy of exploration."

J. Wellington Finch, ex-state geologist of Colorado, later general manager of the Goldfield Consolidated Mining Co., expressed similar views as did J. Howland Bancroft, an eminent mining engineer, and many others too numerous to mention.

MINING vs. OTHER INVESTMENTS

"From Mining and Engineering World"
their Last Issue. (1916)

A few mining companies have returned to their "sucker" stockholders on a total issued capitalization of \$104,715,537 dividends totaling \$284,158,403, or an average of better than 271 per cent on their investment. This will several times double dividends

that Oatman would become the greatest gold section in America.

The corporation commission safeguards the investor.

WHAT THE LEOPARD SPOT GOLD MINE COMPANY OFFERS THE INVESTORS

A square deal.

An interest in a high-class property that gives promise of becoming a high-class investment.

A high-class stock for a very low price.

An equal chance with the promoters.

Experience and intelligent management of the company's affairs.

Our purpose is to install hoist and perfect equipment at an early date.

Our purpose is to list the stock at an early date.
