## **ACCESS STATEMENT**

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

## **CONSTRAINTS STATEMENT**

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

## **QUALITY STATEMENT**

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

# LEXINGTON ARIZONA

# THE MINES OF OATMAN

THE properties of the Lexington Arizona Mining Company, an Arizona Corporation, lie upon the one broad thoroughfare of the Tom Reed-Gold Road District, largely upon the east side of the gulch, one mile south of the main shafts of the Tom Reed and Big Jim mines, the mineral zone being an entirely distinct and parallel one to that in which has been opened the United Western, United Eastern, Tom Reed and Big Jim Mines.

## MINES

The Lexington Arizona Mining Company is the owner of 155,484 acres of mineral lands, embraced within the borders of the Lexington, Happy New Year, Boston, Alice, York, York Annex, Bunker Hill, Andy, Big Andy, Only Chance, Big Johnnie, and South Annex Mining Claims, a compact group the greater portion of which is patented.

## HOLDINGS

### TOWNSITE

The company is the owner of the town of OLDTRAILS, upon the Scenic Branch of the National Oldtrails Highway, platted upon the westerly portion of the Lexington properties. Oldtrails has a population estimated at 500; is the nearest to the mines of the Nellie, Lazy Boy and Pioneer vein systems and is the most desirable and favored spot in the District for business and residence purposes.

### ELECTRIC LIGHT

The OLDTRAILS electric installation is the property of the Lexington Company and electricity is furnished for power and lighting purposes.

### WATER SYSTEM

An extensive system of water mains has been laid throughout the townsite of Oldtrails and to adjacent mines and the Lexington Company supplies the needs of this part of the District from its steel reservoir upon the Bunker Hill claim overlooking Oldtrails.

### LEXINGTON SPRINGS

At an altitude of 4000 feet, in the Lexington Springs, this Company has the only supply of water which will flow by gravity into the District. The springs provide an abundance of cool mountain water, requiring a pipe line of six miles to convey the same into Oldtrails, the building of which is contemplated at an early date.

## MINING OPERATIONS

Other than many cuts, trenches and shallow shafts, development has been largely centered in a series of shafts, five in all, placed upon the York, Happy New Year, Lexington, and Big Johnnie claims, demonstrating the existence of large bodies of low grade material for over 3500 feet in length, these workings being from 50 to 225 feet in depth. The new permanent shaft which is a three compartment affair is sunk upon the Happy New Year, at a point opposite the largest bodies of ore yet opened upon the property and at the most available site for erection of a mill for dump and tailings.

The properties are equipped with one Fairbanks-Morse gasoline engine and hoist and one Charter engine and hoist which will be replaced with electric power.

The sale of Oldtrails lots, water and electricity is constantly increasing and will ultimately prove a considerable source of revenue.

Throughout the Tom Reed-Gold Road District, the outcrops of the prominent fissures are largely calcite (spar)—with the replacement of calcite with silica (quartz) at depth the gold content of the vein increases, pay ore coming in at from 400 to 600 feet depth. The rule, therefore, is to develop with deep vertical shafts placed away from the vein and sinking in the country andesite to the proper depth, a working from the bottom of shaft is extended toward and into the vein.

A thousand feet of exploration in shaft sinking, driving drifts and cross cuts into and beneath the quarter section of mining lands grouped as the Lexington, has convinced the company that it possesses one of the largest gold mines of the Oatman section and all that is required to usher in another Arizona dividend payer is to complete the new shaft to the 600 foot level projecting the cross cut south through the Lexington, Boundary Cone and other veins of the Lexington Arizona Mining Company.

# THE MINES OF OATMAN

## THE LEXINGTON ZONE

The central mineralized zone of the District, is the Lexington, lying as it does, midway between the Gold Road and Tom Reed upon the north and the Lazy Boy-Nellie Zones upon the South.

The Lexington according to some geologists is the oldest mineralized fissure of all, leading to the belief that more examples of mineral deposition will be found in the Central zone than elsewhere.

**A VEIN OF MANY MERGERS.** At the exact center of the mineral belt, no other juncture of so many important veins occurs in the entire Oatman section. The various veins forming the Lexington can be traced for thousands of feet to the west. From the Boundary Cone, the Gold Key, the Gold Dust, the Oversight, Bennett, Apex Pioneer, Arizona Tom Reed, Oatman Queen, Golconda, Leland-Mitchell, Gilt Edge and others, all trend easterly toward a common center and bury themselves into the one gigantic fissure—the Lexington.

### VALUE OF COMPONENT PARTS

Based upon the market valuation of the shares of a number of companies, whose veins center in the Lexington, the latter should have a combined selling value of \$2.00 per share and upward.

|                                 |  |           |

\$2.00

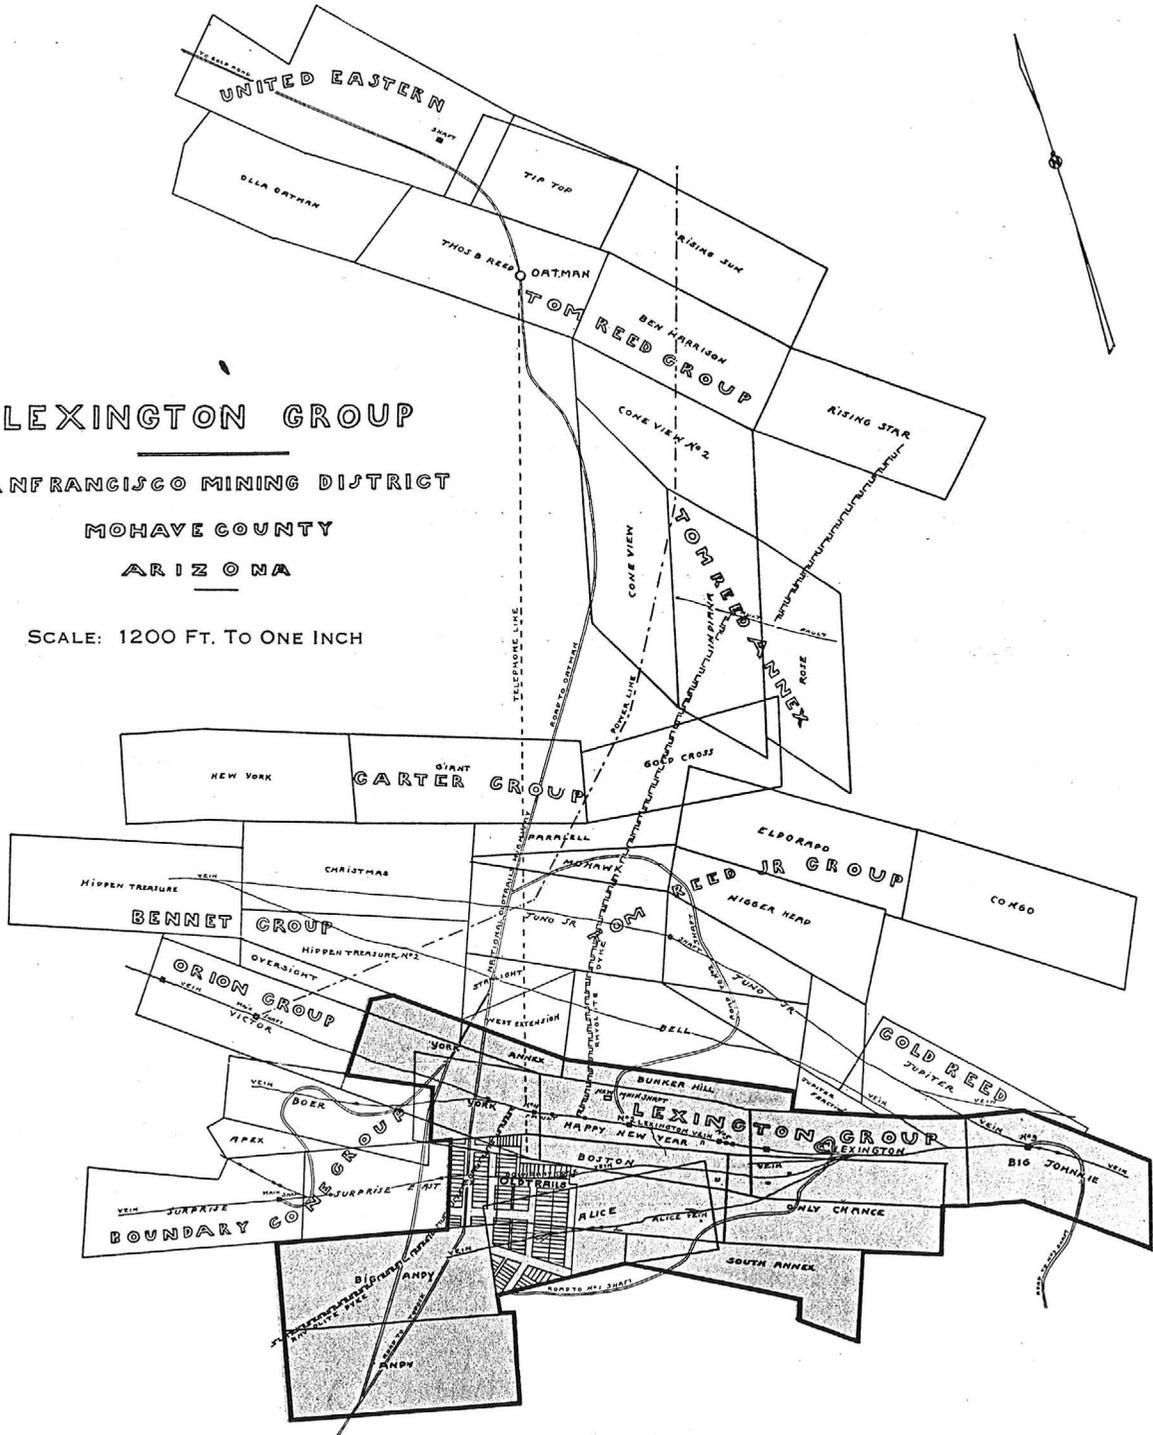

An expert comparison of the geological merits of the veins outcropping upon the Lexington group, with the westerly continuation of the same, is favorable to the former, for:

**THE LEXINGTON ESTATE** is entirely removed from any menace of the older Andesite; the filling of veins at the surface is largely quartz and long unbroken stretches of outcrop are presented where ore shoots of magnitude can make and have continuity and further, it is in the same northerly-southerly horizon of the United Eastern-Tom Reed and Big Jim—the District's most noted mines.
