Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

MAB GROUP

GREENLEE COUNTY

MG WR 6/29/84: The MAB Group of claims (Greenlee Co) are owned by Mr. Paul Turney (c). This property is an eastern extension of the property leased by Phelps Dodge for its Ash Peak operation. the recent exploration drilling has confirmed the presence of a silver-bearing quartz vein. For an interest in the property, Venture Drilling Co (c) of Tucson drilled two angle rotary holes that intersected the vein about 150 feet below the surface. This work was done in 1983 (?) During early 1984 the Minerals Division of Superior Oil Co drilled four angle core (?) holes that intersected the vein about 300 feet below the surface. Superior dropped its interest in the property because it did not appear to be a significant source of primary silver. superior does acknowledge, however, that the vein may be a major source of silver-bearing silicious flux.
