## **ACCESS STATEMENT**

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

## **CONSTRAINTS STATEMENT**

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

## **QUALITY STATEMENT**

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

DEPARTMENT OF MINERAL RESOURCES  
STATE OF ARIZONA  
FIELD ENGINEERS REPORT

Mine Mariquitta

Date April 9th, 1947.

District La Cholla, Yuma Co

Engineer A.C.Nebeker

Subject:

Location:

The Mariquitta mine is located 8 miles west of Quartzite, Arizona, and  $1\frac{1}{2}$  miles north of the oiled highway. The property consists of 8 claims, and a good road to the mine.

Vein and formation;

The vein is a crushed quartz vein 6 to 8 feet thick, with a dip of 45 degrees to northeast, strike northwest. Wall rock schist.

The ore gold quart, gold occurring free with hematite iron. I am told the values average \$12.00 gold per ton.

Development:

Development consists of many surface trenches, a incline shaft 300 feet and drifts on the 100, 200, and 300 level.

The work going on at the present time is repairing ~~the~~ the timber in the shaft.

Equipment:

Consists of 25H.P. gasoline hoist, mine cars, drills a good headframe and a couple of buildings.

Three men working.

Operators:

The property is being worked by Chas. E. Storie, E. Russell with Art Adam as foreman.
