MINE: Matterhorn No. 9 Quarries

ADMMR Mine File: Same (to be created)
County: Coconino
AzMILS Number: 297

SUMMARY

In the company of Robin Sherman and Diana Newton of Shenew Associates and Harley Gray, Jr. of Drake Stone Products visited the company's sandstone-flagstone processing plant at Drake, their Rock House Quarries (ADMMR Rock House Quarry file), and their quarries in the upper end of Grindstone Canyon (ADMMR Matterhorn No. 9 Quarries file). Harley Jr. and his wife Debbie, the owners of Drake Stone Products, have retained Shenew Associates to help in expanding markets for their sandstone.

Their typical quarry operations proceed as follows: soil and alluvium is removed; holes are drilled and shot to along natural joints in the sandstone with only enough explosive to "bump" blocks free so they can be worked by hand; using hand tools (wedges and double jacks) the blocks are split parallel to bedding planes into the desired thickness; and stacked onto pallets for hauling to the stone yard at Drake.

At the yard stone may be further split, trimmed, sawn, guillotine cut, etc. into both stock shapes such as tiles, blocks, and slabs and special order shapes such as mantels and benches.

Drake Stone products operates many quarry sites. Some are actually different parts of the same quarry. Hand work is done by individuals or very small crews of 2 to 4 people. Most of the workers are Mexican-Americans and members of families that have quarried sandstone in the area for many generations. All workers are employees of Drake Stone Products, primarily U.S. citizens, but with some foreign workers holding work permits ("green cards"). Many of the workers retain strong family ties in Mexico and take the holiday season, All Saints Day (Nov. 1) to Lent, off to visit in Mexico. Since that same period is one of lower demand for construction materials, the company can easily accommodate those workers that wish to leave during that period

A photograph showing a person's legs and arms as they use a hammer to split a large, layered block of reddish-brown sandstone. The person is wearing a light-colored shirt, dark pants, and tan work boots. The sandstone has distinct horizontal layers and a rough, weathered texture. The background is a bright, sandy area. The text is overlaid on the right side of the image.

The qualities that make Coconino Sandstone popular are due to several characteristics that make it an *excellent* building stone. First, of course, is its *lasting beauty*. Attractive colors are available, coupled with its general linear form, the stone is *highly adaptable* architecturally.
