ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

Mohave County, Arizona.

About six miles east
Of the Colorado River

Address E.S.Gannon

Address 1026 West 30 St.

Los Angeles, Cal.

Gen. Mgr.

Mill Supt.

Men Employed

Mill: Type & Cap.

Sinking a shaft about one hundred feet and cross-cutting the lode. where the andesite and rhyolite contact.

Two claims. Held by right of discovery.

The property is on the foot hills of the range and can be reached by automobile. Topock on the Santa Fe is the nearest town, a distance of 28 miles.

The only work done so far has been exploration work at and near the surface, one shaft is 16 feet deep and several cross cuts by trenching the lode at the surface.

Geology & Mineralization The geology is similar to, that at the Tom Reed and United Eastern mines of the Catman district. The values are found in porphyry, quartz & andesite.

Ore: Positive & Probable, Ore Dumps, Tailings

Mine, Mill Equipment & Flow Sheet

Road Conditions, Route The property is reached by automobile being in the low hills on the Western side of the range.

Water Supply Water supply is from the Colorado River a distance of six miles. The outlook for a water supply being developed on the property is the best ever found along the western side of the range. Both mesquite and water weeds are found above a large quartz vein that is cut and exposed by a small canon.

Brief History This porphyry belt has never been prospected until we started to do some prospecting in it in 1935. We found the Golden Gate first and that gave us a lead to prospect along the line of that discovery where we were not long in finding the Mohave Chief strike.

Special Problems, Reports Filed

Remarks Values in gold are found across 60' in width at the surface

If property for sale: Price, terms and address to negotiate.

We have three parties interested in taking the property at present in case ~~XXXXXXXXXXXXXXXXXXXX~~. we do not make a deal with any of them it will be for sale again.
