Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

Dear Joe:

I wrote Mr. Allison as you suggested telling him about my copper prospect at Swansea and also my claims adjoining the Harqua Hala bonanza mine. In this group the downward extension of the faulted Harqua Hala orebody must necessarily exist and a little drifting, crosscutting or diamond drilling from the bottom of a 300 foot shaft should locate the orebody in which case the Harqua Hala district would suddenly come to life and become a greater producer than ever before.

When you come over here I shall be glad to show you my properties and point out to you my idea of faulting at Harqua Hala where the block of ground containing the bonanza orebody simply slid off the mountain on my ground.

[At Swansea I have a better surface showing than that at the Swansea mine and my geology is somewhat similar and better. I am fully convinced that I have the making of an important copper mine and I am personally doing all the digging on it that I possibly can.

I am enclosing a geologic sketch of the Swansea district where I own the Record group where I believe the chlorite schist contains a valuable orebody. The Eshom claims named Arizona, Phoenix and Yuma is where I have a mineralized limestone that is highly altered and favorable to mineralization as evidenced by the numerous outcrops of copper minerals and which would not be for sale at this time had I been a younger man. If you can find a capitalist who is not afraid of spending a little money we will make both Swansea and Harqua Hala boom as never before.

Yours sincerely,

R. P. Thompson
