

- EXPLANATION**
- GEOLOGIC - Strata as described in the accompanying report with geologic units show as numbers A-10, qm, etc.
- SEDIMENTARY ROCKS
- ALLUVIUM recent caliche cemented conglomerates
- METAMORPHIC ROCKS PINAL SCHIST GROUP
- 187 QUARTZITE
 - 189 ARGILLITE - includes aphanite of possible rhyolite affinity
 - 198 SCHIST
- IGNEOUS ROCKS
- 920 LATITE
 - 173 A-10 ANDESITE
 - 167 A-9 "
 - 167 A-8 "
 - 114 A-7 "
 - 167 A-6-1 "
 - 191 QUARTZ MONZONITE₁
 - ALASKITE
 - 189 QUARTZ MONZONITE₂ APLITE
 - 999 DIORITE
 - QUARTZ VEINS
- CONGLOMERATE
- BRECCIA - lithologic or tectonic
- Strike dip values exceeding 75° omitted
 - Dip vertical
- GEOLOGIC BOUNDARIES
- Probable
 - Covered, uncertain or inferred
 - Fault
 - Locality of type section
- CULTURAL
- Pre-1972 drill holes
 - Discovery monument
 - Pits and small shafts
 - Roads as of May 1, 1972
 - Post 1972 drill holes
- C. I. 25 Ft
0 400 800
Feet
