

U.V.X. Gold Project

809 Drilling; Inclined section

Section inclined $\sim 23^\circ$ NNE, approximately in plane of holes 809-1, 2, 4, 6 (all drilled $+23^\circ$ bit from common station and therefore not exactly in common plane). No corrections made for 809-3 (drilled 55° E but probably deflected more to E) though dip corrections would be minimal because dips are nearly vertical there.

Don White Aug. 1987
