

Vulture Mine, Pit Area

Showing drillholes and gold intercepts projected to surface along presumed constant 35° N-dipping strata.
 Note: No corrections made for fault offsets, nonconformable mineralization, or strike and dip variances (all of which are known to exist).

- Legend:**
- Caller of hole
 - Working (circle)
 - Not by drillhole
 - 18' } True width of hole
 - 18' } and gold intercept (see note)
 - 18' } on one survey line (see note)
 - 18' } Working from site
 - End of hole
 - = Approximate collar location for 600 350 hole (not yet surveyed)
