

5th Level

V.S.

N

5' level  
1" = 25' approx  
5' level

concrete with chimney-like body  
mass. or. or above

massive marlized  
w. ls.

fessure a little  
cut stain

Spec. 295

Some massive ls. but  
some soft grey  
crushed ls.

Ls. soft + crushed along fault -  
app. a branch fault

On this side mostly white ls. but  
much non-pelite material

white ls.

65  
Stops above in ls. on both  
sides of fault

approx contact

Stops above on fissure

Plenty shale or non-pelite

Coal-side vein. a  
fissure carrying some  
or. or. Not much  
movement.

75' Hard compact ls.  
Beds near vent. Perhaps  
compact folds. Not typical  
white ls. but prob. is Carb.  
approx contact

main fault

A sharp V-shaped syncline in ls.; beds  
rather thin and not typical marlized  
w. ls. This gives a hint of what I am inclined to believe is the general structure -  
closely compressed folds.

Ls. beds much broken. Bedding indistinct.

A compact syncline 30'  
from x-cut. Not very distinct  
but I believe it is there  
The same as at location of diff.  
crushing + some out. in  
axis.
