

3rd Level  
L.P.?

ANWR  
B310-008

1" = 50 FT (?)  
Lucky Cuss Mine

14' of marlstone, spec. 305,  
clear interbedded with  
ls.

Transition becomes very  
irregular. Thin drift to  
S. follows an irregular  
dipping w. road slip.  
Thin bedded ls.

Along ls. in hills are deep channels  
formed in fine ls. some  
deep showing of  
horizontal movement

Massive white  
marble

Thin ls. with at  
least one hard shale.  
Prob. ls.

80' fine pitch N. 20°  
Another irreg. fiss in ls. some steps

at 15" drop 7/8' irreg.  
strong irreg. fiss

Basal marlstone material

4-6' crustal rock + gouge  
shales and some thin chert fine-g. ls. like 295, from 5th lev.

shale. In part rusty and flinty  
in part gray-green + flinty.

band ls. conglon.  
304  
Ls. with laminae of marlstone  
shale

streak of shale. Dishes contact  
shaly material. Building indistinct  
Some laminae have a shale not typ. Carb.

shattered ls. Prob. not Carb.

Massive white  
marble

shattered ls. and a little  
shaly of marlstone

shattered ls.  
shaly of marlstone

shattered ls.
