WAGE S'TATISTICS AND COPPER OUTPUT
ARIZONA AND UNITED STATES COPPER MINES
Base Period (1947-1949) Compared With 1960-1962 Period
Source: Arizona Employment Security Commission, U. S. Dept. of Labor, U. S. Bureau of Mines

The Arizona Department of Mineral Resources has recently compiled several tables of wage statistics and copper output of Arizona copper mines, comparing them with wages paid in other major industries in Arizona and the United States.

The base period of 1947-1949 has been used in making the comparison because that is the period used by the U. S. Department of Labor in determining the Consumer Price Index (or Cost of Living).

As in previous reports, this Department has shown that hourly wage-rates in the copper mining industry have been increased annually at a much greater rate than the Consumer Price Index. For example, the Hourly Earnings Index in Arizona copper mining for 1962 has increased 103.9 percent over the base period, while the Consumer Price Index has increased only 29.3 percent. During the same period the Hourly Earnings Index in U. S. copper mining has increased 97.1 percent.

Incidentally, it might be noted that the hourly earnings in copper mining in Arizona for the base period were reported to be $\$ 1.432$ as compared with $\$ 1.431$ for U. S. copper mining, as reported by the U. S. Department of Labor "Employment and Earnings". For the year 1962, comparative figures $\$ 2.920$ for Arizona and $\$ 2.82$ for the United States. This is cited because of the general belief that there has been a wage differential in favor of the Northern States over Arizona.

In the copper mining industry, productivity would be based on the total output of copper and the measure of it would be pounds of copper produced per manhour of labor. Responsibility for any change in productivity need not be the miner's labor alone. Improvements in technology and mechanical equipment are probably more important factors. The only reason the man-hour unit is used is because labor is the biggest factor in the cost of producing copper, and it is therefore a good practical measure, serving to indicate whether productivity is keeping up with rising costs, thus checking inflationary tendencies.

As mentioned in previous reports, it has been generally believed that real wages of labor cannot rise faster than real output. In other words, we cannot get more out of the economy than we produce. It has been shown that since World War II, real output, or productivity, in general has been growing at an average of only 2 to 3 percent a year - while wages, on the average, have been climbing 5 to 6 percent a year.

In this year's study of the copper mining industry, a comparison was made between the three-year base period (1947-1949) and the latest three-year period (1960-1962). Because the by-products of gold and silver, produced with the copper,
are factors in determining the miner's output, the total value of metal produced has been converted into pounds of copper at the average copper price. Preliminary figures for the 1962 production of copper, gold and silver from copper ores in Arizona and the United States were used in obtaining the three year averages for the 1960-1962 period,

The study shows that in Arizona the pounds of equivalent copper produced per man-hour was 29.9901 in the base period, as compared with 37.0497 pounds in the 19601962 period, or a total increase in productivity of $23.54 \%$ for the 13 -year period or $1.81 \%$ per year. The hourly earnings for the base period were $\$ 1.432$, and for the 1960-1962 period were $\$ 2.806$, or a total increase of $95.95 \%$ or $7.38 \%$ per year.

Corresponding figures for the United States copper mining industry were 26.1639 pounds of equivalent copper produced per man-hour in the base period, as compared with 32.9439 pounds in the 1960-1962 period, or a total increase of $25.91 \%$ an average of $1.99 \%$ per year. The hourly earnings were $\$ 1.431$ in the base period, and $\$ 2.73$ in the 1960-1962 period, a total increase of $90.78 \%$, or $6.98 \%$ per year.

The total covered employment in copper mining in Arizona in 1962, according to the Employment Security Commission, amounted to 14,408 employees with wages amounting to $\$ 101,920,108$. Additional copper smelter employees handling custom ores such as Asarco's Hayden smelter and Phelps Dodge's Douglas smelter, averaged 988 employees with covered wages amounting to $\$ 6,639,024$. This makes a grand total, for copper mining, milling and smelting of 15,396 covered employees and $\$ 108,559,132$ covered wages in the copper industry of Arizona.

This report does not include fringe benefits, which, in another study by this Department in 1959, were estimated to average $25 \%$ of the payroll. It has probably been slightly higher in 1962. With a copper industry pay-roll of $\$ 108,559,132$ in 1962, fringe benefits would add approximately $\$ 27$ million to labor costs for the year.

In some publicity information that came out from the International Union of Mine, Mill and Smelter Workers the following statement was made:
"John Clark, Mine-Mill president, noted that 1962 saw 5,000 fewer workers produce $10 \%$ more copper than in 1956, while in the nation's brass mills 2,800 fewer workers produced almost exactly the same tonnage as in '56. 'What we see in copper is not peculiar to this industry', Mr. Clark said, 'It is typical of all major U. S. industries as automation, increased mechanization, and speedup take their toll!'

This Department has checked the figures discussed by Mr. Clark in the March 22, 1963 issue of American Metal Market, and the statistics reported in the February, 1963 , issue of U. S. Dept. of Labor s 'Employment and Earnings', and the U. S. Bureau of Mines Preliminary Report of theCopper Industry in 1962, and present herewith comparative figures for 1956 and 1962:-

|  | Total Pounds | Number of | Average | Total | Lbs. Copper |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Mine Copper Recovered | Copper Mining Employees | Weekly Hours | Man Hours | Recovered per Man-hou |
| 1956 | 2,049,455,804 | 34,400 | 43.7 | 79,243,840 | 25.863 |
| 1962P | 2,200,000,000 | 28,500 | 44.3 | 63,577,800 | 34.610 |
|  | Avg. Hourly | nings | Total Wages | Cost | Per Lb. Copper |
| 1956 | \$ 2.31 |  | \$ 183,053,270 |  | \$ . 0893 |
| 1962P | 2.82 |  | 179,289,396 |  | . 0815 |

## TABLE I

## ESTIMATED HOURS AND EARNINGS IN SELECTED INDUSTRIES IN ARIZONA

 YEAR 1962Source: "Arizona Current Employment" Employment Security Commision.

These estimates are based upon a sample of full and part-time production and related employees whose payroll and hours are reported for the pay period ending the 15th of the month.

| 1962 | Average <br> Employment | Average <br> Weekly <br> Earnings | Average <br> Weekly <br> Hours <br> $1 / /$ | Average <br> Hourly <br> Earnings | Base <br> Hourly |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Copper Mining 4/ | 13,350 | $\$ 129.29$ |  | 44.28 | $\$ 2.920$ |

1/ Actual hours worked.
2/ Includes overtime earnings.
3/ Base hourly rate is a straight time rate, and is obtained by dividing the "Weekly Earnings" by the "Weekly Hours" plus $50 \%$ of the excess hours over 40 hours.

4/ Includes smelter employees at Kennecott's Hayden smelter.
5/ Includes smelter employees at P. D.'s Douglas and Asarco's Hayden smelters.
OTHER NON-AGRICULTURE EMPLOYYIENT *

|  | Average Employment |
| :---: | :---: |

## TABLE V

ESTIMATED EMPLOYMENT, WEEKLY HOURS, HOURLY AND WEEKLY EARNINGS IN ARIZONA COPPER MINING BY YEARS FROM 1947 TO 1962 INCL.

## Source: Arizona Employment Security Commission

These estimates are based upon a sample of full and part-time production and related employees whose payroll and hours are reported for the pay period nearest the 15 th of each month.
