Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

FOR S.

SAN MARCOS SOUTH

LA PAZ COUNTY

NJN WR 1/16/87: Rich Lundin (c) reported that Rio Algom (c) has been active at the San Marcos South (file) La Paz County.

KAP WR 2/26/88: In the company of Nyal Niemuth a visit was made to the San Marcos South mine (file) La Paz County to determine the current status of the property and to determine what if any recent drilling (as purported) had been done. A separate report has been written for the file. No drilling was noted contrary to notes on the rumor page in the file.

MINE: San Marcos South
COUNTY: La Paz
ADMMR FILE: San Marcos South Mine

ENGINEER: Ken A. Phillips
and Nyal Niemuth
DATE: February 25, 1988

SUBJECT: Property visit on above date.

In the company of Nyal Niemuth a visit was made to the San Marcos South Mine (file), La Paz County to determine the current status of the property and to determine what if any recent drilling (as purported) had been done.

The operation previously visited and described on April 13, 1983 is abandoned. Only a small amount of scrap iron and PVC pipe remains. The leach heap has been covered with gravel and top soil and is supporting a nice crop of desert vegetation. The small production cut is partially backfilled with waste.

Production was from a pit 75 feet long, 15 feet wide and 15 feet deep at the deepest at the site of an old shallow prospect shaft. Mined material consisted of fractured, altered, silicified schist with relic pyrite. No information was available on the grade of the material or the recovery. No drilling was noted contrary to notes on the rumor page in the file.

PROPERTY SUMMARY

I. MINE NAME San Marcos South OTHER POSSIBLE NAMES San Marcos South #9-28
INCLUDING ANY CLAIM NAMES NOTEDII. LOCATION: T 5N R 12W SEC(S) S $\frac{1}{2}$, Sec. 14 MINE DISTRICT Ellsworth
ELEV. 2400' COUNTY La Paz TOPO QUAD. Gladden 15'DIRECTIONS Tenahatchipi Pass pipeline road south from U.S. 60, 2.6 miles then
south east about $\frac{1}{2}$ mile on San Marcos Mine Road then take south road at junction
about 7/10 mile to mine. MAP ATTACHED XIII. OWNERSHIP: NAME Jim Risser PHONE ADDRESS: 5222 N. Dromedary, Phoenix, AZ 85018COMPANY NAME IF ANY: Foundation Mining CompanyPERTINENT PEOPLE IV. PROPERTY AND HOLDINGS: Twenty-two unpatented claimsV. PAST PRODUCTION - NOTED, KNOWN, PROBABLE, UNKNOWN, NONE Unknown, Mine is currently
active.VI. CURRENT STATUS: Active - Cyanide Heap Leaching OperationVII. WORKINGS: Old prospect pits and short drifts. Current production from open cuts.VIII. GEOLOGY AND MINERALOGY: DEPOSIT TYPE: LENGTH: WIDTH: + 10 feet VEIN STRIKE N-SHOST ROCK: Aplite dikes in granites, gneiss and schistECONOMIC MINERALS: GoldCOMMENTS: Gold mineralization appears confined to a line of narrow boxwork stringers.The lead is the ironstaining. Gold is very fine.IX. EQUIPMENT ON SIGHT: Grizzly, vibrating screen, 9 x 16 jaw crusher, pelletizing auger,
plastic leach pad, pregnant and barren solution tank, 2 stage carbon adsorption plant
(200# in each), stripping tank and plating cell. Ancillary generator set,
trucks, loader, shop and trailer house.

X. SAMPLING: NOTE TYPE IF ANY, DRILLING? Mr. Risser reported he drilled property
prior to purchase from Ted and Arie Hilbrand. Ore to heap is reported to
average 0.1 Au. Recovery approximately 0.75 Au and .02 Ag.

XI. REFERENCES AND REMARKS Ore is drilled, shot and loaded into trucks. Mine run ore is
dumped across 8" grizzly. Minus 8" is conveyed to a vibrating screen where +3/4"
falls to a 9"x16" jaw crushed. Minus 3/4" is combined with 3/4" crusher product,
all of which is conveyed to a auger peletizer. Sodium cyanide at a rate of 2 lb per
ton and cement at 10 lbs/ton is added to the crushed^x orestream prior to pelletizing.
No lime or caustic is needed as cement is sufficient to maintain Ph at about 10.
Leach solution is applied with rainbird plastic sprinklers. Solution flow is stabilized
at about 17 gallons per minute. Loaded carbon is stripped and precious metals are
electrowon. No details on recovery or reagent consumption are available.
