Arizona Department of Mines and Mineral Resources Mining Collection

## **ACCESS STATEMENT**

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

## **CONSTRAINTS STATEMENT**

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

## **QUALITY STATEMENT**

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

STATE OF ARIZONA  
FIELD ENGINEERS REPORT

Mine ' See Lee Claims

Date June 15, 1961

District Big Bug District, Yavapai Co.

Engineer Lewis A. Smith

Subject: Interview with L.R. Connelly

Property: 3 unpatented claims (leased by L.R. Connelly and G. H. (Dutch) Siebold).

Operators: G. H. (Dutch) Siebold and L.R. Connelly, 419 N. 20th St., Phoenix 6.

Minerals: Lead, silver and zinc.

Work: Siebold and Connelly built 1/2 mile of bulldozer road to the claims. Several location holes and cuts are present also.

Geology: Mr. Connelly stated that the vein they were working on lies in strongly metamorphic green colored rocks. The vein occupies a fault zone which trends generally northeast and dips steeply.

Anderson, C. A. and Creasy, S. C., Geology and Ore Deposits of the Jerome area, Yavapai County, Arizona: U.S. Geol. Survey, Prof. Paper 308 (1958) pp 26-28 and p 156, describe the area west of the Crown King Mine for about a mile. This could place the See Lee deposit in the older Pre-Cambrian Green Gulch volcanics near to the contact with dioritic intrusives. The Iron King is in a strong shear bordered on the west by Spud Mountain volcanics and the Iron King volcanics to the east. The Green Gulch volcanics are composed of tufaceous sediments and flows of andesitic basaltic composition. The tufaceous sediments are of rhyolitic-andesitic composition. If the location given by Connelly is close, the property would probably be in the Green Gulch formation or in the neighboring diorite. The Green Gulch formation borders the Spud Mountain group along the Chaparral Fault.
