Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

ADMMR STROUD BROTHERS MINE FILE

STROUD BROTHERS MINE

COCHISE COUNTY

HEM WR8/6/88: The Stroud Brothers Mine, Cochise County was visited. The property is sporadically mined for crushed decorative stone by a partnership including the Dragoon Topsoil Company. The rock is a brecciated, red hematite stained, pinkish marble mapped by Copper and Silver (1984) as Black Prince Limestone. Some manganese oxide staining is also present. The most colorful rock is found along a NNW fault zone but does not seem to be developed for any great width, perhaps 50 - 75 feet.
