ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

DEPARTMENT OF MINERAL RESOURCES
STATE OF ARIZONA
FIELD ENGINEERS REPORT

Mine La Brash Group

Date September 27, 1943

District Hassayampa Mining Dist of Yavapai Co Engineer B. W. Brown

Subject: Examination for A.E. Roche, Box 284, Prescott.

The La Brash Group of holdings of Agnes E. Roche, Box 284 Prescott, Arizona consists of seven unpatented mining claims located in the Hassayampa Mining District of Yavapai County about 9 miles by road from Prescott, a station on the Santa Fe Railroad. The group is situated about $\frac{3}{4}$ mile from Indian Creek Forest Camp and about $\frac{1}{2}$ mile from the Hassayampa river and is in the proximity of the Sterling and Morgan mines. The La Brash Claim, one of the group of seven, may be reached directly by the Oro-Flame road for a distance of about $\frac{3}{4}$ of a mile from the forest control road -- the Oro-Flame road is barely passable to this point.

The property was examined both by daylight and with the Ultra-violet lamp in the night darkness. The chief mineralization was found to be Scheelite (CaWO_4) which here occurs disseminated throughout massive dikes of milky-quartz, sometimes called bull-quartz. These veins, the largest of which is about 10 feet wide and traceable across the claim and on to others of the group, strikes through a country of coarse granite in an approximately North-South direction, and dips to the East with an inclination of nearly 60 degrees. The workings on the property consist of old abandoned pits and shallow shafts made in the course of location and prospecting during earlier times when this district was being searched for gold. No recent work except of a prospecting or locating nature has been done.

The owner has reported a tungsten assay from the La Brash Claim of 1.17%. In view of this, and considering the spotty showing of the Scheelite when examined under Ultra-violet radiation, it is recommended that a thorough and controlled preliminary sampling be made of the La Brash Vein to determine whether or not the ore will average a grade of Tungsten that can be mined economically for milling.

B. W. Brown-FIELD
