The following file is part of the Doug K. Martin Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

1-10-84
Sun

Gold Bat or O'Brien Mine

Maneopa Co. - 15 mi NE of Wickensburg & 2.7 mi NE of
Constellation

1915 - Vertical shaft 700' level

Principal Rock - Fine grained Granite w/ schist inclusions
Intruded by Pegmatites, Granite-Perphyry & basic Dikes

Fissure N70°E & S30E

West side of O'Brien Gulch @ 3400' Elev.
Str. N 70 E Dip 30° NW.

Vein - Coarsely x'd, glassy, grayish-white Qtz.

Qtz locally oxidized w/ cellular cavities containing abundant Hematite
& limonite formed from pyrite

Pyrite present in deeper workings

Gold occurs as fine to med. coarse particles - both in Qtz &
iron minerals

Wall rock shows intense Sericitization

Mine workings indicate the ore shoot was a Chimney
about 40 x 50 ft in x-section at the surface & plunges 30° SW.

1907 Prod:

Concentrates Averaged:

Au 2.0 oz/T

Ag 3.0 oz/T

Iron - 49%

Silica - 15%

Sulphur - 15%

1909 produced *91,749 worth
of Au

1907 produced 33,402 Billion
+ tenentrites
