The following file is part of the Grover Heinrichs Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

Dixie Apex Mine

South of St. George and North of the Colorado river there are several Pliocene and later dikes and volcanoes that intruded basin and range structures. These intrusives are basaltic in composition. Minor amounts of Cu are associated and can be found locally along most basin and range structures.

The Dixie Apex appears to be a local concentration of mineralization on a basin and range structure. The possibility of finding a sufficient tonnage to be of interest to Essex is very remote.

Perhaps a trip into this area should be made, so that we can have first hand knowledge to substantiate the above and be prepared to respond to future submittals from the region.

Dear Mr. Sandberg:

In reviewing my files I find that I have not corresponded with you since receiving your letter of February 7, 1973.

We have studied the area of the Apex Mine in southern Utah and have decided to do no further work on the property at this time. If you develop more information from your office we would appreciate receiving it.

Please excuse my delay in informing you of our actions on the property.

Very truly yours,

Paul I. Eimon

Elk Grove Village, Illinois 60007

Dear Mr. Sandberg:

This will acknowledge your letter of January 17, 1973, to Mr. Howard Lanier.

We would like to have our Essex Exploration Geologist, Mr. Dennis C. Temple, visit the Apex Mine during March of this year as part of the exploration we are doing in that general area. Mr. Temple is scheduling work in that area and if it would be possible for you to have someone show him the property please contact Mr. Temple directly by mail at our Tucson office. If we do not hear from you he will go directly to the mine to evaluate the property.

We would like to keep the maps and reports sent to Mr. Lanier until we have visited the property and will return them after that visit if the property is of no further interest to us.

Sincerely yours,

Paul I. Eimon
Manager of Exploration

Attention: Mr. Paul I. Eimon, Manager of Exploration

Dear Mr. Eimon:

I have received your letter of February 2, 1973, acknowledging receipt of the Apex Mine maps and reports.

I am sorry to advise that I do not know what the present status of this property may be. It has been several years since I looked at the mine. At that time, Mr. Emerald Cox of St. George, Utah was the owner.

My best suggestion would be to contact Mr. Cox or the Washington County Court House to determine present ownership.

Please feel free to retain the maps and reports as long as you have use for them.

Sincerely Yours,

THE GALIGHER COMPANY

Dear Howard:

Enclosed are the Dixie Apex Mine maps and reports which I promised to send. When you no longer have use for them, I would appreciate having them returned. Feel free to make copies for your files if you so choose.

I enjoyed the meeting and discussion of your plans; and I hope, in some small way, we may be able to contribute to the success of your operations. Our Salt Lake Office will be in touch with Bob Lear, at Milford. Please give Bob my regards when you see him.

Best personal regards,

THE GALIGHER COMPANY

EXPLANATION

Rocks exposed underground are limestones of variable structure, texture and composition. Hard siliceous phases predominate, sandy, dolomitic material common in altered zones. Fine uniform textured pure limestones in lower levels mainly. Rocks are probably Carboniferous in age.

- Bedding relatively undisturbed.
- Bedding indistinct.
- Rock intensely fractured.
- Loose breccia blocks.
- Unique limestone bed.
- Distinct shale bed or parting between limestone beds.
- Altered breccia zone, sandy, clayey, limestone fragments softened.
- Vein zone with scattered FeOx gossan.
- Massive FeOx gossan.
- Vertical wall sample cut.
- Two or more cuts in same sample.
- Horizontal wall sample cut, length as indicated.
- Strike and dip of bedded rocks. Dashed where uncertain.
- Direction and dip of contacts and veins.
- Fault, dip angle of fault plane in degrees.
- Fault with gouge zone.
- Shear or fracture, displacement of breccia-tion along the fracture plane ind.
- Shear or fracture with brecciation along fracture plane.
- Open fractures or solution cavities.
- Survey spad or marker.
- Workings surveyed or traversed for this map.
- Workings as shown on old mine maps.
- Vertical raise and height above track level.
- Inclined raise, inclination angle and height.

Survey Work, geological mapping, sampling and preparation of accompanying Geologic Report on Apex Mine by Kay McGriffin, Consulting Geologist, May - June 1962.
