The following file is part of the Roland Mulchay Mining Collection

## **ACCESS STATEMENT**

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

## CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

## QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

## KING OF ARIZONA

Owner:

Controlled by A. C. Simpkins and Associates, Box 23, Blythe, California.

Located:

54 miles south of Quartzite, Kofa Mining District, Yuma County, Arizona.

Gold

Production: \$3,000,000

CONCLUSION:

Vein material left by the former operators is too low grade to justify the purchasing, reequipping and mining this old property.

LOCATION:

Ten claims located at Kofa in the S.H. Mountains, 26 miles east of the Stone cabin on the Yuma-Quartzite road.

MINERALIZATION

AND GEOLOGY:

The King of Arizona vein is a fissure striking N 600 W and dipping 600 to the SE, in an andesite country rock. Close to the surface, its width varies from 5 to 10 feet. The vein is easily followed for a distance of one claim. Gold occurred free in the vein; some silver also was present. The gold content of the vein decreased with depth so that at the inclined depth of 900 feet the vein values were \$6.50/ton (\$35/Au. oz.) Bierce estimated that there were 500,000 tons of this material left in the mine. On the northwest end of the property 2600 feet from the shaft, a rhyolite zone 40 feet wide was mineralized to a small extent. A. C. Simpkins estimated a tonnage here of 300,000 with a \$7 per ton gold value at \$35 per Au. oz. In this latter area there is insufficient development work to determine the tonnage of possible ore. Two samples were taken which assayed 0.18 oz. Au/ton and 0.03 oz. Au/ton considerably lower than Simpkins' estimate.

COSTS:

From a cost standpoint, the operation would not pay.

\$2.25 Mining

1.00 Dev.

1.25 Milling - 250 tons/day

.50 Amort

.60 Royalty

Total cost - \$5.60

Value of ore as mined - \$6.00 Mill Recovery - 90%

Value/ton recovered from ore - \$5.40 10/25/34 C. M. Brinckerhoff C. M. Brinkerhoff - A. L. Rood
