ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

Lines 1 - 7

INTRODUCTION

At the request of Mr. Albert D. Thomas of Bisbee, Arizona, Heinrichs Geoexploration Company conducted and completed a magnetic survey over parts of the Liberty Claims, Cochise County, Arizona during the interim August 24 through August 26, 1966.

Seven lines were run in a N-S orientation and a 25 foot station spacing. A total of 3800 feet of line was surveyed. The data was taken with a Jalander hand-held, flux-gate type, vertical intensity magnetometer having a sensitivity of +/- 10 gammas.

This work was done to determine if magnetics would respond to the mineralization in the area.

Geoex personnel on this job were Fred Heinrichs, geophysical crew chief and Mike Fitz. Report and interpretation by the Tucson Geoex staff under the supervision of Chris S. Ludwig, Senior Geophysicist.

CONCLUSION, RECOMMENDATION, AND INTERPRETATION

The plan contour shows a pronounced E-W lineation in the magnetic values, probably indicative of the geologic structure or grain in the area. The prospect and shaft shown on the plan are both about 100 feet north of a magnetic low and could be related to it. On the south ends of Lines 6 and 7, the magnetic level drops about 200 gammas, possibly due to similar mineralization as mentioned

above, although this zone trends NE-SW. There are several magnetic highs in the area which could be related to mineralization, namely at 225, Line 4, and 575, Line 5. On the north end of Line 7, a magnetic high is building up but is not completely defined. The strongest anomaly encountered on the survey is the low at about 250, Line 1 having an amplitude of nearly 400 gammas and may be due to a fault, dike or mineralized zone.

The interpretation and plan map is somewhat vague due to the lack of a claim and geology base map for control and it is recommended that such a map be made if further work is desired. Magnetics could be quite helpful in this area if correlated with the geology.

Respectfully submitted,

HEINRICHS GEOEXPLORATION COMPANY
