ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

PROOF OF LABOR

STATE OF Arizona... }
COUNTY OF Pima..... } ss

BEFORE ME, personally appeared James A. Briscoe, President, James A. Briscoe & Associates, Inc., an Arizona Corporation, who, being duly sworn, says: My current address is 5701 East Glenn St., #120, Tucson, Arizona 85712, my current residence is as above. Certain labor and/or improvements required by law were performed or made on or for the benefit of the following lode mining claim(s), [which together comprise a group of ~~non~~-contiguous claims] located in the Tombstone Mining District of Cochise County, Arizona, in the mining assessment work year ending on September 1, 1985 as follows:

Name of Claim (in full)	Mining Records Original Location Book Page	Mining Records Original Location Book Page
Ernest Edward Lode Claim Group (see Attachment 1)		

The work performed and/or improvements made consisted of the following:

Technical studies including geological, geochemical and geophysical surveys, see Attachment 2.

The total fair and reasonable value thereof was at least \$300.00 and the amount and value thereof on or for the benefit of each claim was \$100 or more. The name and address of the person who performed the labor or made the improvements, as known to me, are: All work was performed by or for James A. Briscoe & Associates, Inc. 5701 East Glenn Street, #120, Tucson, Arizona 85712, Phone: (602) 721-1375, under the direction of James A. Briscoe Registered Professional Geologist, State of California #518 and Arizona #8424, Owner of the firm. (For others performing work see Attachment 2).

The undersigned, acting as agent for the mining claim owner(s) whose address(es) is(are):

NAME	CURRENT MAILING ADDRESS
T. S. Henderson et al.	P. O. Box 1015 Tombstone, AZ 85638

The above listed claims are held and claimed by the owner(s) for the valuable minerals contained therein.

James A. Briscoe & Associates, Inc. (Agent)

By James A. Briscoe
James A. Briscoe, President

SUBSCRIBED AND SWORN TO before me by James A. Briscoe known to me to be the President of the corporation performing work described herein above, and that executed the within instrument on behalf of the above named owner on this 19 day of December, 1985.

IN WITNESS WHEREOF I have hereunto set my hand and affixed my official seal

SUMMARY REPORT

November 26, 1985

This detailed report is filed in compliance with the requirements of Title 30, United States Code, Section 28-1 for the Ernest Edward claims, a contiguous group of 3 unpatented lode mining claims, situated in the Tombstone Mining District of Cochise County, State of Arizona.

The work consisted of continued:

1. Reduction of geological data to standard scale geologic map coverage of the area.
2. Analysis and computer logging of old production reports, geological geophysical and geochemical maps from previous mining activities.
3. Annotation to geological base map of geological data acquired during previous underground mining eras with more recent information acquired by other companies and governmental agencies.
4. Establish ground control by field surveying - aerophoto targeting.
5. Flying aerial photography.
6. Reproduction and enlargement of select color photographs of the area.
7. Initial and continued geologic and alteration mapping from both aerial photography and ground truth reconnaissance.
8. District-wide lineation analysis using reproduced black and white aerial photography.
9. Reproduction, organization, analysis, and interpretation of pre-existing drilling, geochemical, geophysical and geological data.

This work was performed over the entire claim group to evaluate the discovery of valuable mineral deposits located thereon and to assist in planning further exploration and development work. The work was performed throughout the period from September 1, 1984, to August 31, 1985, by or for Tombstone Silver Mines, Inc., P. O. Box 1016, Tombstone, Arizona 85638, telephone (602) 457-3601, under the direct supervision of James A. Briscoe, a Registered Professional Geologist for 15 years in the State of California (No. 518) and Arizona (No. 9424), with degrees from the University of Arizona (B.S. Geology, M.S. Geology, 1967). Other persons performing work upon said claims were:

Thomas E. Waldrip, Jr., Geologist/Landman, B.S. Geology, University of Arizona, 4426 E. Patricia St., Tucson, Arizona 85712
Mardee A. Stewart, Business Manager, A.S. Hospital Management, Lasell Junior College, 5701 East Glenn St., Tucson, Arizona 85712
Charles B. Escapule, Vice President, Tombstone Silver Mines, Inc., P. O. Box 1016, Tombstone, Arizona 85638
C. Bailey Escapule, Jr., Geologist, B. S. Geology, University of Arizona, Tucson, P. O. Box 1016, Tombstone, Arizona
Professional and other services provided by:
Cooper Aerial Survey Company, 1692 W. Grant Rd., Tucson, AZ 85745
Tucson Blueprint, P. O. Box 27266, Tucson, Arizona 85726
Reproduction, Inc., 234 E. 6th St., Tucson, Arizona
Moria Surveying, Tombstone, Arizona

The cost of the geological, geochemical and geophysical studies exceeded \$300.00, and was paid for by Tombstone Silver Mines, Inc., lessee of subject mining claims.

The basic findings to date, from the continuing technical studies performed on this non-contiguous claim group are:

1. The terrain in the immediate claim area is composed of a Mesozoic to Cenozoic complex of northeasterly trending andesitic and rhyolitic intrusive dikes intruding a late-Mesozoic succession of volcanic pyroclastics (Uncle Sam Porphyry-tuff). A sedimentary section of Mesozoic aged shales, calcareous mudstones and quartzites (Bisbee Formation), and even older Paleozoic and Mesozoic succession of dominately marine limestones are known to be present in the immediate area. These scattered exposures of stratigraphically lower sedimentary rock units are shown through drilling to be subaerially continuous at shallow to moderate depths from their areas of surface outcrop, through and across the claim area.
2. Paralleling the intrusive trend, and spacially related with it, are at least one, and possibly more, hydrothermal alteration centers exhibiting alteration zoning and oxidized capping similar to other porphyry copper deposits in Arizona. Alteration within the area includes, but is not limited to, silicification, hematization (after pyrite), alunitization, sericitization and argillization. Rock outcrops within and near the claim area exhibit one or more of these alteration types with intensities ranging from weak to strong.

85025562

Attachment 2, Cont.....

3. The overlapping or lineal nature of the proposed multiple alteration centers makes it difficult to interpret the exact horizontal metal zonation pattern exhibited. It appears to be suggestive of several semi-concentric but overlapping metal zoning patterns outwards from multiple alteration centers. Only one alteration center appears to exist near the claim group, however. Zonation is broken in one or more directions across the claim area, with these yet to be filled in, due to lack of outcrop. Results to date indicate a central zone anomalously high in copper and molybdenum surrounded by an irregular zone of higher lead and zinc values, outwards to a highly manganeseiferous zone. (The latter zone is not exhibited in the claim area). This metal zoning pattern is indicative of porphyry copper mineralization centers, hypothetically proposed to exist within or near the claim area. In the intermediate and outer zones, base and precious metal vein type deposits are found zoned radially to, or outwards from, the proposed porphyry copper center.
4. Currently, results from the past drilling, surface assaying, ground geophysics, and detailed ground magnetic surveys are inconclusive. Work remains to fully analyze and interpret results of these surveys in the forthcoming annual exploration expenditure period.
5. Initial interpretation of the ground magnetic surveys indicates anomalously higher magnetic values associated with intrusive rocks of granodioritic and andesitic composition as was exhibited on the aeromagnetic survey. Conversely, anomalously lower values are encountered in areas of the hydrothermal alteration centers.
6. Below the volcanic veneer is a thick section of Mesozoic sediments through which drilling in excess of 5,000 feet, some 2 miles distance, has failed to penetrate. These drilled sediments have numerous dike-like intrusions of varying composition. Attendant to these zones of intrusion, the sediments have undergone various degrees of alteration and mineralization. Mineralization, herein, exists in three different modes of occurrence. Namely: 1. Tension veins and veinlets; 2. Disseminations in the host rocks and/or intrusive dikes; and 3. Cross cutting vein zones of the "sericitic" type found in the upper volcanic zones.
7. Surface geophysical studies are suggestive of large amounts and areas of rather weakly mineralized rock at intermediate to moderate depths, as verified by drilling elsewhere. Several anomalous responsive zones have been located, but to date, remain untested.

These results have hastened efforts to delineate, extend, and develop, by scientific principles, known and suspected areas of valuable mineral content, within the boundaries of subject mining claims.

An exploration-development program consisting of drilling, sampling, geological, geochemical, and geophysical studies, is presently under consideration for this property. All technical work and results are in the possession of and are considered to be the exclusive property of Tombstone Silver Mines, Inc., the owner of subject mining claims with offices at P. O. Box 1016, Tombstone, Arizona 85638, Attention: Mr. Charles B. Escapule, Vice President and Operations Manager.

Respectfully submitted,

James A. Briscoe

LODE CLAIM

TO ALL WHOM IT MAY CONCERN:

That certain Claims, the names of which are **LENNIS LEIGH** and **CHARLES HATCHER and DONALD VOGEL** Citizens of the United States residing in Tombstone and Tucson, Arizona.

The date of this notice is the 28th day of August 1974.
The length of this claim is 1500 feet
and we claim 750 feet

The claim is bounded as follows:
North easterly
South westerly
The center of the discovery shaft at which this claim is located being 300 feet from the center of said claim. The general course of the shaft post being
north easterly
south westerly
The claim is situated on the Coconino County in the State of Arizona about 1 mile North easterly from Old Charleston and in Section 1 T 21 S R 21 E. adjoins and parallels Buena Vista L. & C. Co. on its North easterly side line

The surface boundaries of the claim are marked by a monument of stone and post

at a point a north easterly
the distance of which from the north easterly end line of said claim, there being the south easterly
1500
south westerly
to a monument
there 300
north westerly
to a monument
there 300

shaft, at which this notice is posted, lengthwise of the claim, together with 300
feet in width of the surface grounds, on each side of the center of said claim. The general course of the lode deposit
and premises is from the N. E. to the S. W.

The claim is situated and located in the TOLBSTONE Mining District, in Cochise
County in the State of Arizona, about 1 1/2 miles in a N. E. direction from Charleston Station, on the Southern Pacific R. R., and about 3500 ft. in
a northeasterly direction from what was formerly called the "MANILA MINE."

The surface boundaries of the claim are marked upon the ground as follows: Beginning at
a monument

at a point in a northeasterly direction 1235 feet from the discovery shaft (at
which this notice is posted), being in the center of the N. E. end line of said claim; thence 300
feet to a monument, being the N. E. corner
of said claim; thence 1500 feet to a monument, being at the
S. E. corner of said claim; thence 300 feet to a
monument at the center of the S. W. end of said claim; thence 1500

shaft, at which this notice is posted, lengthwise of the claim, together with 300 A MC 71982
feet in width of the surface grounds, on each side of the center of said claim. The general course of the lode deposit
and premises is from the N. E. to the S. W.

The claim is situated and located in the TOMBSTONE Mining District, in Cochise
County in the State of Arizona, about 1 1/2 miles in a N. E.
direction from Charleston Station, on the Southern Pacific R. R. and about 3500 ft. in
a northeasterly direction from what was formerly called the "MANILA MINE."

542

The surface boundaries of the claim are marked upon the ground as follows: Beginning at
a monument
at a point in a northeasterly direction 1285 feet from the discovery shaft (at
which this notice is posted), being in the center of the S. E. end line of said claim; thence 300
feet to a monument, being the S. W. corner
of said claim; thence 1500 feet to a monument, being at the
S. E. corner of said claim; thence 1500 feet to a
monument at the center of the S. E. end of said claim; thence
feet to a monument, being at the S. W. corner of said claim; thence
1500 feet to a monument at the S. E.
corner of said claim; thence 300 feet to the place of beginning

Dated and posted on the ground this 12th day of March, 1909
All done under the provisions of the laws of the United States, in and for the State of
Arizona.

This is an Amended Location Notice of the MANILA #1 MINE, owned by GALLAGHER-VANADIUM & RARE MINERALS CORPORATION on the 2nd day of October 1908, and recorded in Book 63 of Records of Mines, at page 521, in the office of the County Recorder of the County of Cochise to which reference is hereby made, and this amended location notice is made and posted to correct errors in the description in the said original location notice, and to supersede any errors that may have been made in the said original location notice, filed and recorded in Book 67 Record of Mines, on page 433

RECORD OF MINES.

NOTICE OF MINING LOCATION.

LODE CLAIM.

To all Whom it May Concern:

THIS MINING CLAIM, the name of which is the BLANKET #1

Mining Claim, situate on lands belonging to the United States of America, and in which there are valuable mineral deposits, was entered upon and located for the purposes of exploration and purchase by GALLAGHER VANADIUM & RARE MINERALS COR'P.

Citizens of the U. S. A. (Lessor must insert either "A citizen of the United States" or "Who has declared his intention to become a citizen of the United States.")

the undersigned, on the 2 nd. day of October, 1925.

The length of this claim is 1500 feet, and we claim 1255 feet in a N. E. direction, and 245 feet in a S. W. direction from the center of the discovery shaft, at which this notice is posted, lengthwise of the claim, together with 300 feet in width of the surface grounds, on each side of the center of said claim. The general course of the lode deposit and premises is from the N. E. to the S. W.

The claim is situated and located in the Tombstone Mining District, in Cochise County, in the State of Arizona, about 1 1/2 miles in a N. E. direction from Charleston Station on the S.P.R.R. and about 3500 ft. in a easterly direction from the old Manila Mine

The surface boundaries of the claim are marked upon the grounds as follows: Beginning at a monument

at a point in a N. E. direction 1230 feet from the discovery shaft (at which this notice is posted), being in the center of the N. E. end line of said claim, thence 300 feet to a monument, being the east corner of said claim; thence 1500 feet to a monument, being at the south corner of said claim; thence 300 feet to a monument at the center of the S. W. end of said claim; thence 300 feet to a monument being at the corner of said claim; thence 1500 feet to a monument at the north corner of said claim; thence 300

MAILED IN A MC 71973

and we claim 1200

feet in a

N. E.

direction, and

ARIZONA 71982

feet in a S. W.

direction from the center of the discovery shaft, at

which this notice is posted, lengthwise of the claim, together with 300

feet in width of the surface grounds, on each side of the center of said claim. The general course of the lode deposit and premises is from the

E. E.

to the S. W.

544

The claim is situated and located in the Tombstone Mining District, in Cochise County, in the State of Arizona, about 1 1/2 miles

in a N. E. direction from Charleston Station on the S.P.R.R. and about 3500 ft. in a easterly direction from the old Manila Mine

The surface boundaries of the claim are marked upon the grounds as follows: Beginning at a monument

at a point in a N. E. direction 1230 feet

from the discovery shaft (at which this notice is posted), being in the center of the N. E.

end line of said claim, thence 300 feet to a monument

, being the east corner of said claim; thence

1500 feet to a monument, being at the

south corner of said claim; thence 300 feet

at the center of the S. W. end of said claim; thence

300 feet to a monument being at the

corner of said claim; thence 1500 feet to a monument

at the north corner of said claim; thence 300

feet to the place of beginning.

NOV 6 1970

JAMES STEWART COMPANY
PHOENIX, ARIZONA

Nov 6, 1970

M.S. Horne,

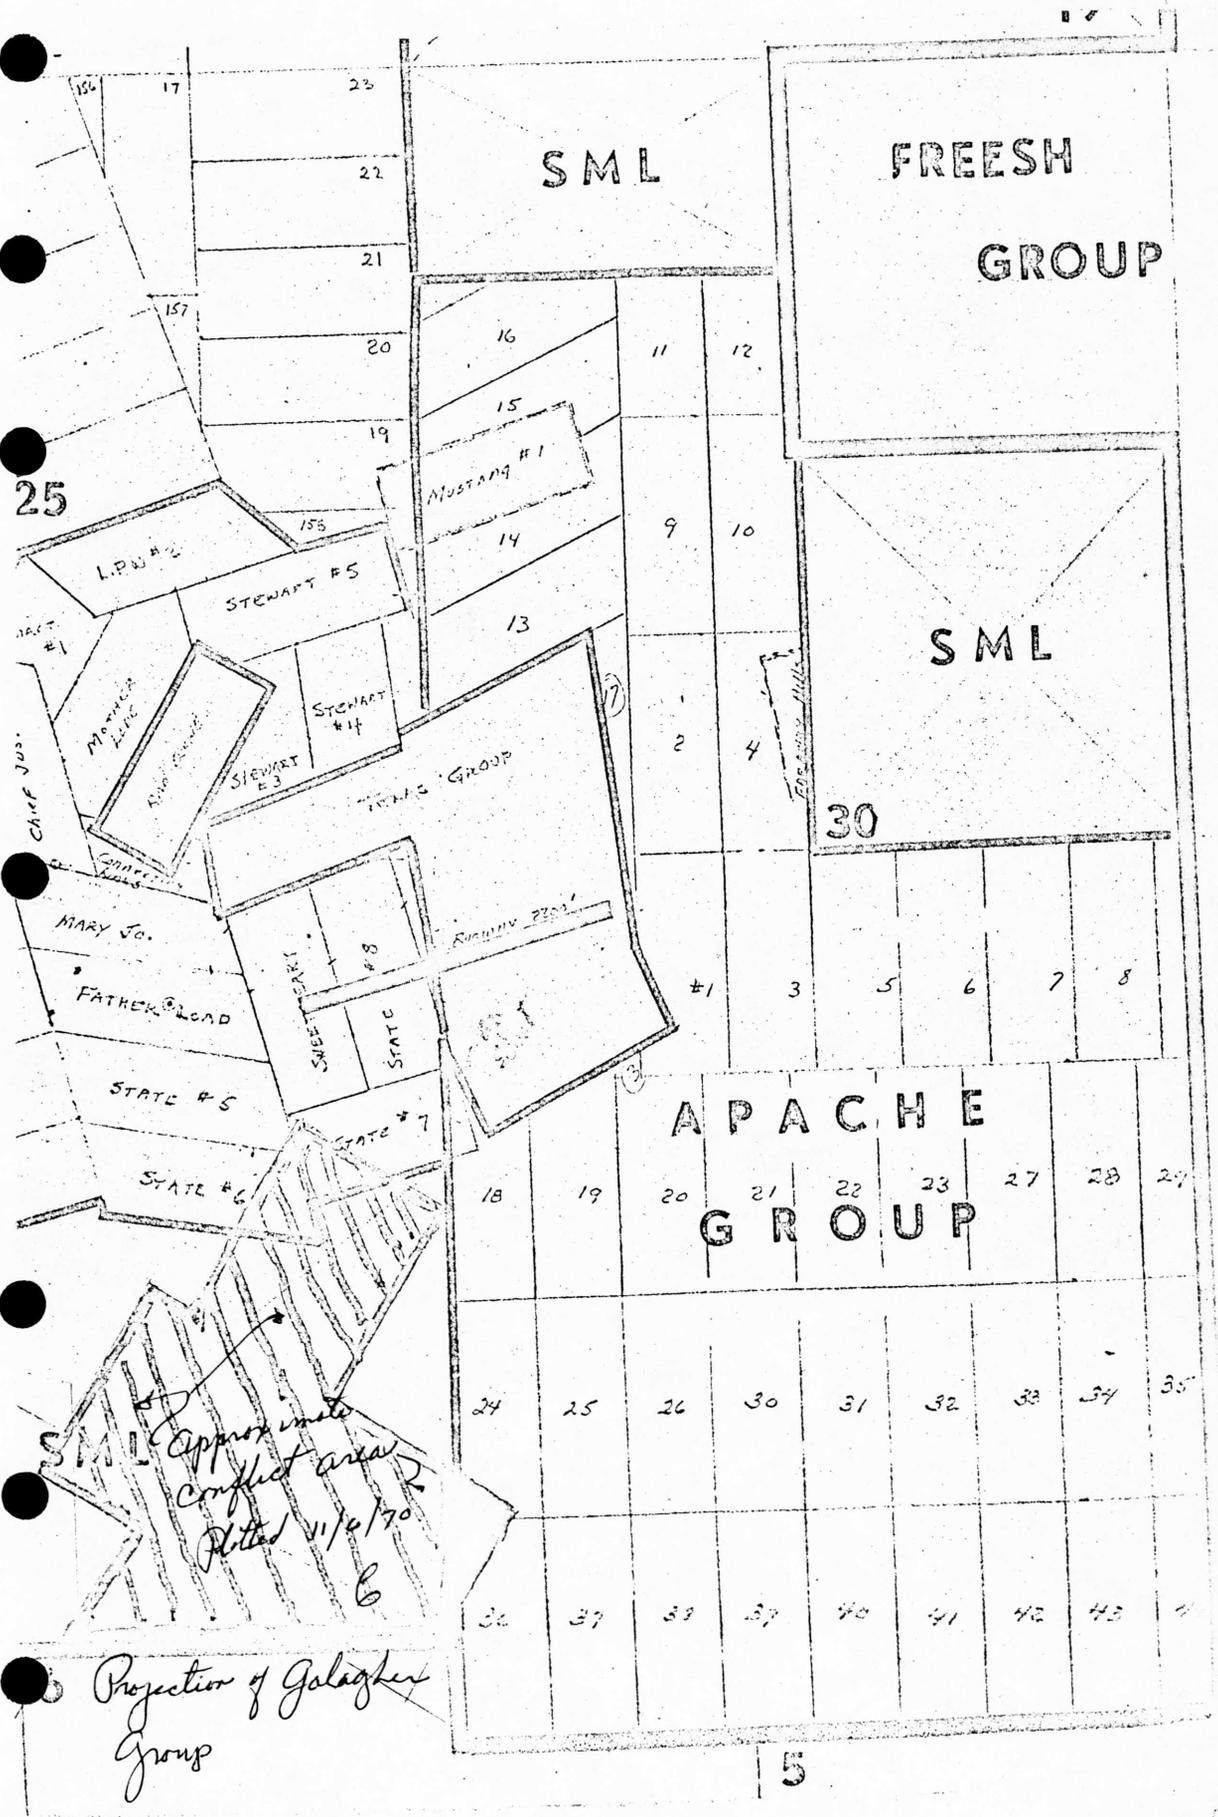

Wednesday morning, while I was in your office, you gave me a print showing the Charleston Claim Holdings and a print of the northerly portion of the Galager group which Harlow is interested in. As ~~nearby~~ closely as possible from data available I have overlaid the conflicting area on the map showing the Charleston Holdings. The area is crosshatched and covers about 40% of the State Mineral Lease area in section 36 and projects into Claims State 6 & 7.

This conflict represents quite an important portion of the mine area which we believed to be clear. The State did not recognize these to be valid claims nor to my knowledge have cognizance of them, except for the patented claims.

SCHEDULE OF LIMITED SEARCH TYPES REFERRED TO ON REVERSE SIDE

All reports issued hereunder are based upon an examination of the proper indices for a stated purpose and for the period of time (if applicable) prescribed below. All such reports are without examination or report as to the sufficiency or validity of any instruments shown.

1. JUDGMENT LIEN REPORT - Fee: \$10.00 per name, plus \$2.00 per lien reported
Indices searched - Judgments, Renewal of Judgments, Federal and State Liens in the office of the County Recorder of the county shown on the reverse side.
Purpose - a showing of any money judgment or tax lien against persons or corporations named on reverse side which would appear to constitute a lien on real property.
2. TAX AND IMPROVEMENT LIEN REPORT - Fee: \$5.00 plus \$2.00 per parcel over one
Indices searched - records of County Treasurer and the Superintendent of Streets of the county and the Treasurer and Superintendent of Streets of any city or town named on the reverse side.
Purpose - a showing of unpaid state, county, city or town taxes, liens or assessments levied under any general or special improvement act against the real property described on the reverse side.
3. CHAIN OF TITLE REPORTS - Fee: \$30.00 plus \$1.00 per item reported
Indices searched - land indices in the Title Plant of the company's issuing office.
Purpose - a showing subsequent to a stated date, of instruments or matters affecting or relating to the record title of the land described on the reverse side.
4. PROPERTY SEARCH REPORT - Fee: \$20.00 plus \$5.00 per parcel reported over one
Indices searched - taxes assessed in a stated name in County Treasurer's office and the County Recorder's indices under a stated name.
Purpose - showing a description of land, title to which was acquired under or assessed to a stated name and not thereafter conveyed.
5. LIMITED REALTY REPORT - Fee: \$20.00
Indices searched - land indices in the Title Plant of the company's issuing office.
Period of time - 10 years next preceding date of this report.
Purpose - showing apparent record owner and a list of recorded mortgages and agreements of sale not satisfied of record.
6. SECURED PROPERTY TRANSACTION, CHATTEL MORTGAGE & CONDITIONAL SALE REPORT - Fee: \$65.00
Indices searched - Secured Property Transactions, Chattel Mortgage & Conditional Sale in office of County Recorder.
Period of time - Chattel Mortgage and Conditional Sale from a stated date to December 31, 1967; Secured Property Transaction from January 1, 1968 to date.
Purpose - a showing of any matters not shown as released in said indices executed by persons or corporations named on the reverse side.
7. FINANCING STATEMENT SEARCH REPORT - Fee: \$25.00 per search; bulk search quoted on request
Indices searched - Financing Statements in the office of the Secretary of State.
Purpose - a showing of any matters not shown as released in said indices executed by persons or corporations named on the reverse side.
8. SPECIAL REPORT

ALL REPORTS ISSUED PURSUANT TO THE SCHEDULE ABOVE REPRESENT A LIMITED TITLE SERVICE AND NOT COVERAGE BY A POLICY OF TITLE INSURANCE.

TITLE INSURANCE, IF REQUIRED AND APPLICABLE, IS AVAILABLE AT THE PUBLISHED RATE FOR THE TYPE AND AMOUNT REQUIRED.

ATTACHMENT 2

SUMMARY REPORT

November 26, 1985

This detailed report is filed in compliance with the requirements of Title 30, United States Code, Section 28-1 for the Las Vegas claims, a contiguous group of 3 unpatented lode mining claims, situated in the Tombstone Mining District of Cochise County, State of Arizona.

The work consisted of continued:

1. Reduction of geological data to standard scale geologic map coverage of the area.
2. Analysis and computer logging of old production reports, geological geophysical and geochemical maps from previous mining activities.
3. Annotation to geological base map of geological data acquired during previous underground mining eras with more recent information acquired by other companies and governmental agencies.
4. Establish ground control by field surveying - aerophoto targeting.
5. Flying aerial photography.
6. Reproduction and enlargement of select color photographs of the area.
7. Initial and continued geologic and alteration mapping from both aerial photography and ground truth reconnaissance.
8. District-wide lineation analysis using reproduced black and white aerial photography.
9. Reproduction, organization, analysis, and interpretation of pre-existing drilling, geochemical, geophysical and geological data.

This work was performed over the entire claim group to evaluate the discovery of valuable mineral deposits located thereon and to assist in planning further exploration and development work. The work was performed throughout the period from September 1, 1984, to August 31, 1985, by or for Tombstone Silver Mines, Inc., P. O. Box 1016, Tombstone, Arizona 85638, telephone (602) 457-3601, under the direct supervision of James A. Briscoe, a Registered Professional Geologist for 15 years in the State of California (No. 518) and Arizona (No. 9424), with degrees from the University of Arizona (B.S. Geology, M.S. Geology, 1967). Other persons performing work upon said claims were:

Thomas E. Waldrip, Jr., Geologist/Landman, B.S. Geology, University of Arizona, 4426 E. Patricia St., Tucson, Arizona 85712
 Mardee A. Stewart, Business Manager, A.S. Hospital Management, Lasell Junior College, 5701 East Glenn St., Tucson, Arizona 85712
 Charles B. Escapule, Vice President, Tombstone Silver Mines, Inc., P. O. Box 1016, Tombstone, Arizona 85638
 C. Bailey Escapule, Jr., Geologist, B. S. Geology, University of Arizona, Tucson, P. O. Box 1016, Tombstone, Arizona
 Professional and other services provided by:
 Cooper Aerial Survey Company, 1692 W. Grant Rd., Tucson, AZ 85745
 Tucson Blueprint, P. O. Box 27266, Tucson, Arizona 85726
 Reproduction, Inc., 234 E. 6th St., Tucson, Arizona
 Moria Surveying, Tombstone, Arizona

The cost of the geological, geochemical and geophysical studies exceeded \$300.00, and was paid for by Tombstone Silver Mines, Inc., lessee of subject mining claims.

The basic findings to date, from the continuing technical studies performed on this non-contiguous claim group are:

1. The terrain in the immediate claim area is composed of a Mesozoic to Cenozoic complex of northeasterly trending andesitic and rhyolitic intrusive dikes intruding a late-Mesozoic succession of volcanic pyroclastics (Uncle Sam Porphyry-tuff). A sedimentary section of Mesozoic aged shales, calcareous mudstones and quartzites (Bisbee Formation), and even older Paleozoic and Mesozoic succession of dominately marine limestones are known to be present in the immediate area. These scattered exposures of stratigraphically lower sedimentary rock units are shown through drilling to be subaerially continuous at shallow to moderate depths from their areas of surface outcrop, through and across the claim area.
2. Paralleling the intrusive trend, and spacially related with it, are at least one, and possibly more, hydrothermal alteration centers exhibiting alteration zoning and oxidized capping similar to other porphyry copper deposits in Arizona. Alteration within the area includes, but is not limited to, silicification, hematization (after pyrite), alunization, sericitization and argillization. Rock outcrops within and near the claim area exhibit one or more of these alteration types with intensities ranging from weak to strong.

Attachment 2, Cont.....

3. The overlapping or lineal nature of the proposed multiple alteration centers makes it difficult to interpret the exact horizontal metal zonation pattern exhibited. It appears to be suggestive of several semi-concentric but overlapping metal zoning patterns outwards from multiple alteration centers. Only one alteration center appears to exist near the claim group, however. Zonation is broken in one or more directions across the claim area, with these yet to be filled in, due to lack of outcrop. Results to date indicate a central zone anomalously high in copper and molybdenum surrounded by an irregular zone of higher lead and zinc values, outwards to a highly manganeseiferous zone. (The latter zone is not exhibited in the claim area). This metal zoning pattern is indicative of porphyry copper mineralization centers, hypothetically proposed to exist within or near the claim area. In the intermediate and outer zones, base and precious metal vein type deposits are found zoned radially to, or outwards from, the proposed porphyry copper center.
4. Currently, results from the past drilling, surface assaying, ground geophysics, and detailed ground magnetic surveys are inconclusive. Work remains to fully analyze and interpret results of these surveys in the forthcoming annual exploration expenditure period.
5. Initial interpretation of the ground magnetic surveys indicates anomalously higher magnetic values associated with intrusive rocks of granodioritic and andesitic composition as was exhibited on the aeromagnetic survey. Conversely, anomalously lower values are encountered in areas of the hydrothermal alteration centers.
6. Below the volcanic veneer is a thick section of Mesozoic sediments through which drilling in excess of 5,000 feet, some 2 miles distance, has failed to penetrate. These drilled sediments have numerous dike-like intrusions of varying composition. Attendant to these zones of intrusion, the sediments have undergone various degrees of alteration and mineralization. Mineralization, herein, exists in three different modes of occurrence. Namely: 1. Tension veins and veinlets; 2. Disseminations in the host rocks and/or intrusive dikes; and 3. Cross cutting vein zones of the "sericitic" type found in the upper volcanic zones.
7. Surface geophysical studies are suggestive of large amounts and areas of rather weakly mineralized rock at intermediate to moderate depths, as verified by drilling elsewhere. Several anomalous responsive zones have been located, but to date, remain untested.

These results have hastened efforts to delineate, extend, and develop, by scientific principles, known and suspected areas of valuable mineral content, within the boundaries of subject mining claims.

An exploration-development program consisting of drilling, sampling, geological, geochemical, and geophysical studies, is presently under consideration for this property. All technical work and results are in the possession of and are considered to be the exclusive property of Tombstone Silver Mines, Inc., the owner of subject mining claims with offices at P. O. Box 1016, Tombstone, Arizona 85638, Attention: Mr. Charles B. Escapule, Vice President and Operations Manager.

Respectfully submitted,

James A. Briscoe
