#### **ACCESS STATEMENT**

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

#### **CONSTRAINTS STATEMENT**

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

#### **QUALITY STATEMENT**

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

ATTACHMENT 2

SUMMARY REPORT

October 15, 1982

This detailed report is filed in compliance with the requirements of Title 30, United States Code, Section 28-1 for the T.D.C. claims, a contiguous group of 31 unpatented lode mining claims, situated in the Tombstone Mining District of Cochise County, State of Arizona.

The work consisted of:

1. Geochemical sampling of bedrock/soil samples.
2. Reduction to standard scale of previously acquired residual gravity and aeromagnetic data.
3. Reduction of geochemical data to standard scale geologic map coverage of the area.
4. Analysis and computer logging of old production reports, geological, geophysical and geochemical maps from previous mining activities.
5. Annotation to geological base map of geological data acquired during previous underground mining eras with more recent information acquired by other companies and governmental agencies.

This work was performed over the entire claim group to evaluate the discovery of valuable mineral deposits located thereon and to assist in planning further exploration and development work. The work was performed throughout the period from September 1, 1981, to August 31, 1982, by James A. Briscoe & Associates, Inc., 5701 E. Glenn St., #120, Tucson, Arizona 85712, Telephone (602) 721-1375, under the direct supervision of James A. Briscoe, a Registered Professional Geologist for 12 years in the State of California (No. 518) and Arizona (No. 9424), with degrees from the University of Arizona (B.S. Geology, M.S. Geology, 1967). Other persons performing work upon said claim group were:

Thomas E. Waldrip, Jr., Geologist/Landman, B.S. Geology, University of Arizona, 4426 E. Patricia St., Tucson, Arizona 85712  
Mardee A. Stewart, Business Manager, A.S. Hospital Management, Lasell Junior College, 5701 East Glenn St., Tucson, Arizona 85712  
Michael L. Robinson, Draftsman/Architect, M.A. Architecture/Urban Planning, Washington University, 5740 E. Baker St., Tucson, Arizona 85711  
Stephen J. Kvetensky, Computer Programmer, A.S. Computer Sciences, Pima Community College, 2225 S. Torrey Pines, Tucson, Arizona 85710  
Susan F. Angelon, Draftsman, 1233 E. Kentucky Drive, Tucson, Arizona 85714  
David Horne, Draftsman, 1644 E. 12th Street, Tucson, Arizona 85720

The cost of the geological, geochemical and geophysical studies exceeded \$3,500.00 and was paid for by the Owners of subject mining claims.

The basic finding to date, from the continuing technical studies performed on this contiguous claim group are:

1. The terrain in the Tombstone area is composed of a Mesozoic to Cenozoic complex of igneous intrusive dikes and stock intruded into sediments, ranging from fine-grained Paleozoic & Mesozoic marine limestones to a complex of Mesozoic shales, calcareous mudstones and quartzites. The igneous intrusive rocks are generally of dioritic to granodioritic composition and in outcrop are often hard to identify because of hydrothermal alteration. Associated with the intrusive rocks are contact metamorphic alteration products including silicification and calc-silicate suite minerals.

ATTACHMENT 2 Cont.....

2. Mineralization in the area of the claim group can be categorically assigned to three main modes of occurrence; A) gold, silver, lead, manganese mineralization found as distinct veins within northeasterly trending dike rock as found in the Contention - Grand Central Dike areas; B) "Roll" type deposits associated with regional folding in the sedimentary host rocks. These deposits are replacements of corresponding reactive host rock or rocks of greater permeability associated with the anticlinal axis of closely spaced north-northwesterly trending dragfolds; and C) gold and silver mineralization along fault zones associated both with the fault zones and as replacement bodies in reactive host rocks.
3. Geochemical sampling and assays of the intrusive dikes and the intruded sediments point to anomalous concentrations of gold and silver within these units. Geological and geochemical interpretation of these assays suggest the presence of a medium grade gold-silver ore body with a potential for economic metals recovery by traditional sodium cyanide heap leaching processes. To date, test leaching of sample ores, and results obtained from these tests corroborate the above interpretations.

These results have hastened efforts to delineate, extend, and develop, by scientific principals, known and suspected areas of valuable mineral content, within the boundaires of subject mining claims.

An exploration-development program consisting of drilling, sampling, geolocial, geochemical, and geophysical studies, is presently under consideration for this property. All technical work and results are in the possession of and are considered to be the exclusive property of Tombstone Development Company, Inc., the owner of subject mining claims with offices at P. O. Box 1445, Grand Island, Nebraska 68801, Attention: Mr. Frank Gallup.

Respectfully submitted,

ATTACHMENT 2

SUMMARY REPORT

September 20, 1979

This detailed report is filed in compliance with the requirements of Title 30, United States Code, Section 28-1 for the T.D.C. claims, a contiguous group of 18 unpatented lode mining claims, situated in the Tombstone Mining District of Cochise County, State of Arizona.

The work consisted of:

1. Vertical color aerial photography at a scale of 1 in. = 500 ft., 1 in. = 200 ft., 1 in. = 100 ft. and 1 in. = 20 ft.
2. Photogeologic mapping on the color aerial photography at a scale of 1 in. = 200 ft. & 1 in. = 20 ft.
3. Reconnaissance surface geologic mapping on the above listed photography.
4. Assaying of geologic samples collected across claim group.
5. Crosscut trenching of a mineralized zone along the Contention Dike for ore grade rock.
6. Test heap leaching of ore grade rock extracted from crosscut trench.

This work was performed over the entire claim group to evaluate the discovery of valuable mineral deposits located thereon and to assist in planning further exploration and development work. The work was performed throughout the period from September 1, 1978, to August 31, 1979 by or for Southwestern Exploration Associates, Inc., 4500 E. Speedway, Suite 14, Tucson, Arizona 85712, Telephone (602)795-6097, an Arizona corporation, under the direct supervision of James A. Briscoe, a Registered Professional Geologist for nine years in the State of California (No. 518) and Arizona (No. 9424), with a degree from the University of Arizona (M.S. Geology, 1967), President of the firm. Other persons performing work upon said claim group were: Southwestern Exploration Associates, Inc. Employees: Mr. James A. Briscoe, Registered Professional Geologist; Mr. Thomas E. Waldrip, Project Manager, Senior Geologist; Mr. Bruce M. Prior, Geologist; Mr. James C. Blankenship, Assistant Geologist; Mr. John D. Kasproicz, Assistant Geologist; Mr. Dustin Escapule, Mr. Al Watterson, and other S.E.A. Hydromet, Inc. employees; aerial photography and reproduction work by Mr. Dana M. Slaymaker, Manager of Southwestern Exploration Associates Photography, Inc., 4500 East Speedway, Suite 14, Tucson, Arizona 85712 Telephone: (602) 795-6274; Assaying work by the State of Maine Mining Company, Tombstone, Arizona Telephone: (602) 457-3001, Attention Mr. Charles Escapule, and by Skyline Labs, Inc., - Hawley & Hawley, P.O. Box 50106, 1700 West Grant Road, Tucson, Arizona 85705 Phone: (602) 622-4836, under the direction of manager William L. Lehbeck (Arizona registered Assayer No. 9425). Metallurgical work by Dr. John Dean of Dean Associates, Elmdale Road,, Box 230 Rural Route 2, North Scituate, Rhode Island 02857 Telephone: (401) 934-0060, and Dr. Dave Rabb, Arizona Bureau of Geology & Mineral Technology, Mineral Technology Division, Geology Building, Room 134, Tucson, AZ 85721

The cost of the geological, geochemical and geophysical studies exceeded \$1,800.00 and was paid for by the lessee of subject mining claims.

The basic finding to date, from the continuing technical studies performed on this contiguous claim group are:

1. The terrain in the Tombstone area is composed of a Mesozoic to Cenozoic complex of igneous intrusive dikes and stock intruded into sediments, ranging from fine-grained marine limestones to a complex of shales, calcareous mudstones and quartzites. The igneous intrusive rocks are generally of dioritic to granodioritic composition and in outcrop are often hard to identify due to their altered nature. In association with the intrusive igneous rocks are a host of metasediments, and alteration products, namely silicification and ankeritic alteration of lime units.
2. Mineralization in the area of the claim group can be categorically assigned to three main modes of occurrence: A) gold, silver lead, manganese mineralization found as distinct veins within Northeasterly trending dike rock as found in the Contention - Grand Central Dike areas; B) "Roll" type deposits associated with regional folding in the sedimentary host rocks. These deposits are replacements of corresponding reactive host rock or rocks of greater permeability associated with the nose of closely spaced north-northwesterly trending anticlines; and C) gold and silver mineralization along fault zones associated both with the fault zones and as replacement bodies in reactive host rocks.
3. Geochemical sampling and assays of the Intrusive dikes and the intruded sediments point to anomalous concentrations of gold and silver within these units. Geological and geochemical interpretation of these tests suggest the presence of a medium grade gold-silver ore body with a potential for economic metals recovery by traditional sodium cyanide heap leaching processes. To date, test leaching of sample ores, and results obtained from these tests corroborate the above interpretations.

These results have hastened efforts to delineate, extend, and develop, by scientific principals, known and suspected areas of valuable mineral content, within the boundaries of subject mining claims.

An exploration-development program consisting of drilling, sampling, geological, geochemical, geophysical studies, and mining is presently under consideration for this property. All technical work and results are in the possession of and are considered to be the exclusive property of Tombstone Development Company, the owner of subject mining claims with offices at P.O. Box 1445, Grand Island, Nebraska 68801, Telephone: (308) 382-7480, Attention: Mr. William Height.

SUMMARY REPORT

September 20, 1979

This detailed report is filed in compliance with the requirements of Title 30, United States Code, Section 28-1 for the T.D.C. claims, a contiguous group of 18 unpatented lode mining claims, situated in the Tombstone Mining District of Cochise County, State of Arizona.

- The work consisted of:
1. Vertical color aerial photography at a scale of 1 in. = 500 ft., 1 in. = 200 ft., 1 in. = 100 ft. and 1 in. = 20 ft.
  2. Photogeologic mapping on the color aerial photography at a scale of 1 in. = 200 ft. & 1 in. = 20 ft.
  3. Reconnaissance surface geologic mapping on the above listed photography.
  4. Assaying of geologic samples collected across claim group.
  5. Crosscut trenching of a mineralized zone along the Contention Dike for ore grade rock.
  6. Test heap leaching of ore grade rock extracted from crosscut trench.

This work was performed over the entire claim group to evaluate the discovery of valuable mineral deposits located thereon and to assist in planning further exploration and development work. The work was performed throughout the period from September 1, 1978, to August 31, 1979 by or for Southwestern Exploration Associates, Inc., 4500 E. Speedway, Suite 14, Tucson, Arizona 85712, Telephone (602)795-6097, an Arizona corporation, under the direct supervision of James A. Briscoe, a Registered Professional Geologist for nine years in the State of California (No. 518) and Arizona (No. 9424), with a degree from the University of Arizona (M.S. Geology, 1967), President of the firm. Other persons performing work upon said claim group were: Southwestern Exploration Associates, Inc. Employees: Mr. James A. Briscoe, Registered Professional Geologist; Mr. Thomas E. Waldrip, Project Manager, Senior Geologist; Mr. Bruce M. Prior, Geologist; Mr. James C. Blankenship, Assistant Geologist; Mr. John D. Kasproicz, Assistant Geologist; Mr. Dustin Escapule, Mr. Al Watterson, and other S.E.A. Hydromet, Inc. employees; aerial photography and reproduction work by Mr. Dana M. Slaymaker, Manager of Southwestern Exploration Associates Photography, Inc., 4500 East Speedway, Suite 14, Tucson, Arizona 85712 Telephone: (602) 795-6274; Assaying work by the State of Maine Mining Company, Tombstone, Arizona Telephone: (602) 457-3001, Attention Mr. Charles Escapule, and by Skyline Labs, Inc., - Hawley & Hawley, P.O. Box 50106, 1700 West Grant Road, Tucson, Arizona 85705 Phone: (602) 622-4836, under the direction of manager William L. Lehmbek (Arizona registered Assayer No. 9425). Metallurgical work by Dr. John Dean of Dean Associates, Elmdale Road,, Box 230 Rural Route 2, North Scituate, Rhode Island 02857 Telephone: (401) 934-0060, and Dr. Dave Rabb, Arizona Bureau of Geology & Mineral Technology, Mineral Technology Division, Geology Building, Room 134, Tucson, AZ 85721

The cost of the geological, geochemical and geophysical studies exceeded \$1,800.00 and was paid for by the lessee of subject mining claims.

The basic finding to date, from the continuing technical studies performed on this contiguous claim group are:

DKT 1367 PAGE 180

ATTACHMENT 2 CONT'D

1. The terrain in the Tombstone area is composed of a Mesozoic to Cenozoic complex of igneous intrusive dikes and stock intruded into sediments, ranging from fine-grained marine limestones to a complex of shales, calcareous mudstones and quartzites. The igneous intrusive rocks are generally of dioritic to granodioritic composition and in outcrop are often hard to identify due to their altered nature. In association with the intrusive igneous rocks are a host of metasediments, and alteration products, namely silicification and ankeritic alteration of lime units.
2. Mineralization in the area of the claim group can be categorically assigned to three main modes of occurrence: A) gold, silver lead, manganese mineralization found as distinct veins within Northeasterly trending dike rock as found in the Contention - Grand Central Dike areas; B) "Roll" type deposits associated with regional folding in the sedimentary host rocks. These deposits are replacements of corresponding reactive host rock or rocks of greater permeability associated with the nose of closely spaced north-northwesterly trending anticlines; and C) gold and silver mineralization along fault zones associated both with the fault zones and as replacement bodies in reactive host rocks.
3. Geochemical sampling and assays of the Intrusive dikes and the intruded sediments point to anomalous concentrations of gold and silver within these units. Geological and geochemical interpretation of these tests suggest the presence of a medium grade gold-silver ore body with a potential for economic metals recovery by traditional sodium cyanide heap leaching processes. To date, test leaching of sample ores, and results obtained from these tests corroborate the above interpretations.

These results have hastened efforts to delineate, extend, and develop, by scientific principals, known and suspected areas of valuable mineral content, within the boundaries of subject mining claims.

An exploration-development program consisting of drilling, sampling, geological, geochemical, geophysical studies, and mining is presently under consideration for this property. All technical work and results are in the possession of and are considered to be the exclusive property of Tombstone Development Company, the owner of subject mining claims with offices at P.O. Box 1445, Grand Island, Nebraska 68801, Telephone: (308) 382-7480, Attention: Mr. William Height.

Respectfully submitted,

AFFIDAVIT OF LABOR PERFORMED AND IMPROVEMENTS MADE

STATE OF ARIZONA  
County of Cochise ss.

RALPH L. VAN ARSDALE being duly sworn, deposes and says that he is a citizen of the United States and more than twenty-one years of age, and resides at Tombstone in Cochise County, State of Arizona, and is personally acquainted with the mining claims known as TDC #1 - #18 Mining Claims, situate in Tombstone Mining District, County of Cochise, State of Arizona, the location notices of which are recorded in the office of the County Recorder of said County, in Book 340 of Records of Mines, at Page 205-221 that between the 1st day of Sept., A.D. 19 77, and the 31st day of August, A.D. 19 78, at least 1800 dollars worth of work and improvements were done and performed upon or for the benefit of said claim s not including the location work of said claim s. Such work and improvements were made by and at the expense of 1971 Minerals Ltd.

lessees /owners of said claim s for the purpose of complying with the laws of the United States pertaining to assessment of annual work and Ralph Van Arsdale, L. D. Peck, Dean Hoffman & John Hughes

were the men employed by said lessees/owners and who labored upon said claim s, did said work and improvements, the same being as follows, to-wit:  
Building and improving access roads, trenching, geologic investigation and rock sampling.

Subscribed and sworn to before me this 1st day of August, 1978  
Elizabeth J. Clow

CERTIFICATION OF PAYMENT OF RENTAL FEE  
IN LIEU OF AFFIDAVIT OF ANNUAL ASSESSMENT WORK  
AFFIDAVIT AND NOTICE OF INTENT TO HOLD

I, James A. Briscoe, being first duly sworn, deposes and says that:

1. I am an agent for Tombstone Development Company, the owner of the following described unpatented lode mining claims situated in Cochise County, Arizona (the "Claims"), the location notices of which are of record in said county, and in the records of the Arizona State Office of the Bureau of Land Management under the file numbers indicated as follows:

Name of Claim	County Records		BLM Serial MC No.
	Book	Page	

See Attachment "A" attached hereto and made a part hereof by this reference

The Claims are situated in:

Sections	Township	Range	Meridian
11 through 15	20S.	22E.	G.&S.R.B.M.
18 & 19	20S.	23E.	G.&S.R.B.M.

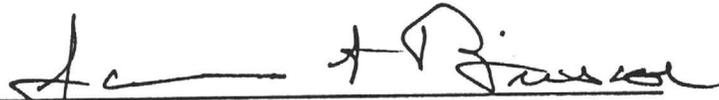

2. Pursuant to Amendment Number 18 of H.R. 5503, of the Department of the Interior and Related Agencies Appropriations Act, 1993, owner has paid a rental fee of \$100 per claim for the assessment year ending September 1, 1993, and an advance rental of \$100 per claim for the assessment year beginning on September 1, 1993, in lieu of recording an affidavit of performance of annual assessment work.

3. The name and address of the owner of Claims for which this Certificate is prepared is: Tombstone Development Company (TDC), P. O. Box 1445, Grand Island, Nebraska 68802, Attention: Jerome Niedfelt, President.

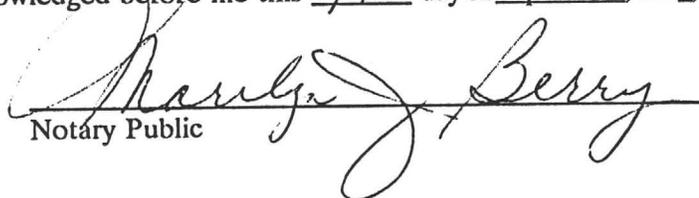

*THIS IS NOT A CHANGE OF ADDRESS*

4. The Claims are held and claimed by the owner for *the valuable mineral contained therein.*

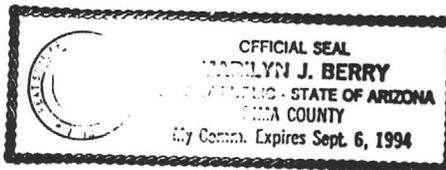

DATED this 14<sup>th</sup> day of September, 1993.

  
Agent: James A. Briscoe

The foregoing instrument was acknowledged before me this 14<sup>th</sup> day of September, 1993,  
by James A. Briscoe.
