James Doyle Sell Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

FILE NOTE

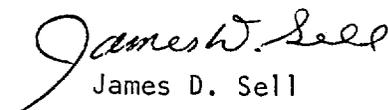

Western States Minerals Corp.
Mohave County, Arizona

At the Valuation Short Course, I talked with Richard McNeely, Northern Regional Manager for Western States Minerals Corporation, and later met Mr. Buck Morrow, President.

Some of the items gleaned:

- 1) They have finished leaching the Portland Mine after placing some 750,000 tons on the pads, with some 52,500 ounces gold contained. (No report on recovered ounces gold, but they reported 100,000 ounces of recovered silver in the dore).
- 2) At Portland, they found that the mineralized zone pinched and swelled along strike as well as down dip and this provided the additional ore.
- 3) They have picked up the Mockingbird property but have only drilled several holes rather close to the outcrop trend and found only similar thin, 4-10 foot thickness, zone as found in outcrop. However, they intend to drill down dip toward the volcanic hill to the east where they anticipate a frontal fault and increased thickness, by splaying out or increased subparallel fracturing to the main detachment zone. This drilling may be started early this spring.
4. They also have picked up the Tin Cup zone (S. Oatman) which is plus-minus on strike with the Fisher-Watt-Santa Fe Secret Pass deposit ($\pm 50,000$ tons of 0.6 opt gold). Western States also has a Secret Pass prospect which is east of FWSF's deposit over a ridge line. They picked the property up based on the number of shafts and pits located around a reported porphyry zone exposed. A road cuts the southeast corner of the Secret Pass property.
5. They also picked up the Black Dyke property on the north side of the Roadside Mine and have a small property position in the Hackberry District adjacent to the Hualapai Reservation NE of Kingman.
6. They are now putting into production a small property in Winnemucca, Nevada, called the Willard Deposit and will also place the Tecoma (Noranda's) deposit in production this year.
